Special OEM Solutions for Automotive, Industry and Marine

VDO

The Future of Mobility Starts with Today's Innovations

As a global supplier of mobile technologies, our passion for mobility strengthens everything we do. Mobility is about more than just effectiveness, it is the key driving force that allows us to reach new goals, make progress, and push beyond boundaries. The concept of mobility is at the core of our vision and reflected in everything we do.

Our employees around the globe are united by their common enthusiasm for modern vehicles and the opportunities that technology offers. The ability to embrace new ideas is just as important to us as experience and focused research and development. That's why experts from a wide range of fields work together within our company. Today, our innovative developments are proof of the success of this operational model.

Examples include our VDO products for a diverse range of special vehicles and machinery. These system solutions and individual components meet the most demanding requirements, yet at the same time offer maximum driving and working convenience.

Our catalog: always up-to-date

We want our Vehicle Electronics catalog to be a reliable companion that is always at your side to help you in your work. To ensure that, it is frequently updated. You will be kept informed of these updates by e-mail. This means you can always have the latest information available with just a few clicks – simply visit our extranet at <http://extranet.vdo.com>.

The process is simple.

If you already have extranet access

Access updates directly	Direct link on the Extranet Home Page or under the following link: Communications >> HQ Communications >> Marketing Communications >> Print >> Segment VE >> Catalog
-------------------------	--

If you do not yet have extranet access

Please register at	http://extranet.vdo.com and select Profile . Your access details will be sent to you immediately.

8.2 OE Line 2	. 279

9. Rearview Systems

10. ProViu™ Surround View Systems - ASL360

11. Product Solutions and Applications

Challenging Tasks Call for Commitment and Experience. We Measure Up.

As requirements become more complex and operating conditions harsher, it is increasingly important to have a strong partner who can support you all the way. This is true across a huge number of applications, ranging from stationary machines through sports cars and leisure boats to special-purpose vehicles for industrial, construction, forestry, and agricultural applications. In all these cases, regular components typically do not offer a satisfactory solution. At the same time, it is essential to use innovative technologies with proven reliability in order to develop specialist custom solutions that deliver the required performance.

VDO's portfolio of products is designed to meet exactly these requirements and caters for a wide spectrum of applications, drawing on our long experience as a supplier to the automotive industry and manufacturer of specialist solutions. With complete solutions and specially developed components, the VDO range of products offers a one-stop shop for optimized system integration. Comprehensive testing and quality assurance procedures allow our solutions to function reliably at all times, even under the harshest of conditions.

A major area of focus for VDO products is management and optimization of engine performance. We support this application area with products, such as sensors, actuators, and fuel systems. These products can help reduce fuel consumption and pollutant emissions, while simultaneously boosting the efficiency of vehicles, boats, and machinery. We also supply a wide selection of versatile solutions for the driver's cockpit, ranging from instrumentation to pedals. These are designed particularly with ergonomics and comfort in mind, helping drivers and skippers stay in full control, whatever the conditions. Our portfolio is rounded out by a broad range of specialist solutions for leisure boats.

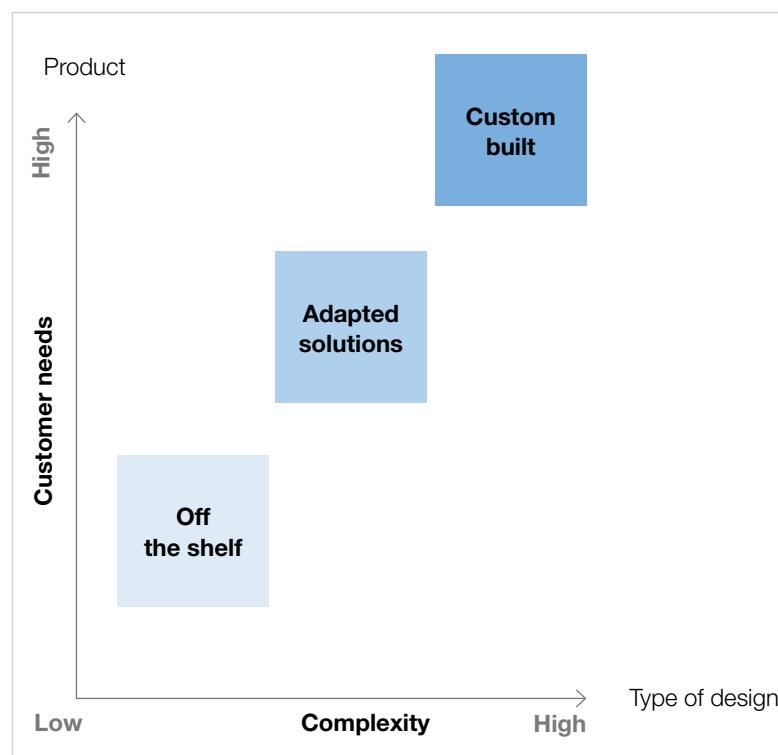

Our array of special products with their countless possibilities for system integration, together with our extensive depth of experience, is what makes us a reliable, trusted partner to manufacturers of special vehicles and machinery as well as the leisure boat industry.

We also develop sensor, control, and instrumentation technology for machines and other equipment, such as generators and compressors, that are powered by an engine but used solely in stationary applications. By utilizing systems that are already in large-scale production, we are able to offer highly cost-effective solutions.

Our solutions:

- Instrumentation
- Sensors
- Fuel system components
- Pedals
- Actuators
- RPM and speed control
- Control units and electronic network solutions
- Screen washer systems
- Equipment for leisure boats and sailing yachts

Complex product requirements make it particularly important to choose a partner who is experienced in series production and can offer specialist solutions that are perfectly adapted to your needs. Special vehicles and machinery in particular must function reliably at all times, no matter how harsh the conditions. The core focus of our work is custom solutions built on tried and tested concepts and adapted to special operating conditions as required. Because our innovative solutions and products are tailored precisely to your needs, they can be easily integrated into existing systems.

Flexible product solutions for diverse applications

We offer standard components, flexible systems, and customized solutions for on-highway and off-highway vehicles, stationary machinery, sports vehicles, and leisure boats.

On-highway

We develop comprehensive systems technology for commercial vehicles approved for highway use. Our portfolio focuses on products for heavy plant and special vehicles, including municipal vehicles, mobile cranes, buses, and other types of commercial vehicle. We offer tailored solutions to suit every type of vehicle, usage profile, and manufacturer requirement.

Off-highway

Our systems for the various types of special off-highway vehicles are developed in close cooperation with engineering and production specialists. We offer proven systems, including audio equipment, for machinery, cranes, and special vehicles used in areas like forestry, agriculture, and aviation.

Leisure vehicles

Tuning companies and car manufacturers who primarily produce hand-finished vehicles in small production runs often have highly specialized requirements, especially when it comes to instrumentation. Many years of experience and a high degree of flexibility make us the ideal partner for anyone seeking custom solutions for these kinds of vehicles.

Leisure boats

We supply shipyards and boat manufacturers with reliable, accurate instruments for navigation, engine monitoring, and onboard electrical system monitoring. Our product range for motorboats and sailing yachts is based on our extensive expertise as a supplier to the boatbuilding industry.

Engines and stationary machinery

We also develop sensor, control, and instrumentation technology for machines and other equipment, such as generators and compressors, that are powered by an engine but used solely in stationary applications. By utilizing systems that are already in large-scale production, we are able to offer highly cost-effective solutions.

Applications

1. Instrumentation

1.1 Analog Instruments

- 1.1.1 Viewline instrument line
 - 1.1.1.a 52 mm OE-Version
 - 1.1.1.b 85 & 110 mm OE-Version
 - 1.1.1.c 110 mm X in 1 OE-Version
 - 1.1.1.d 52 mm Aftermarket-Version
 - 1.1.1.e 85 & 110 mm Aftermarket-Version
 - 1.1.1.f 110 mm X in 1 Aftermarket-Version
 - 1.1.1.g Kits with Sensor
 - 1.1.1.h Accessories
 - 1.1.1.j Warning Gauges
 - 1.1.1.k GPS Speedometer
 - 1.1.1.i Customer-Specific Solutions
 - 1.1.1.l Small Series Program
- 1.1.2 Modulcockpit II
 - 1.1.2.a Dual-Instrument Units – Vertical
 - 1.1.2.b Dual-Instrument Units – Horizontal
 - 1.1.2.c Quad-Instrument Units
 - 1.1.2.d Tachometer with Engine Hours Counter
 - 1.1.2.e Electronic Tachometer

1.2 Analog Clusters

- 1.2 Centrobase 500

1.3 CAN Instruments

- 1.3.1 CANcockpit
- 1.3.2 Ocean Link
- 1.3.3 Accessories
- 1.3.4 Centrobase 350/400
- 1.3.5 FlexCluster

Analog Instruments

1.1.1 Viewline instrument line

1.1.2 Modulcockpit II

Viewline instrument line

Viewline is our new standardized instrument platform for special vehicles and machinery from various sectors. With modular solutions in three housing variants, we offer more features, more flexible installation, and a wide variety of design options. Our space-saving multifunction and combi-instruments are unique in this sector. In addition, Viewline offers designers maximum freedom when laying out the cockpit and represents impressive value.

Built for the toughest jobs

As a technology leader, we are familiar with the complex product requirements of manufacturers of specialist vehicles for industry, construction, forestry, and agriculture. Our product range is tailored to meet these requirements, enabling us to offer fully customized, reliable solutions. Maximum precision and the integration of pioneering technologies are just as important to us as ease of use and stylish design. The latest outcome of our research and development program is Viewline

- an innovative and comprehensive standard instrumentation platform that will replace the existing product series. A whole host of instrumentation variants are possible thanks to the flexibility offered by a range of housing sizes.

Harmony in function and design

Our plug and play design concept for panel and flush mounting means that Viewline instruments offer maximum flexibility when it comes to installation. With or without bezel, the modular concept allows for a high degree of design variation. Uniquely for this sector, every solution features full backlight technology.

The Viewline platform now incorporates a generic display concept that allows a huge variety of sensor signals to be processed and displayed. Viewline is a forward-looking instrumentation concept that guarantees quality and flexibility and offers greater design freedom and diversity.

Simple to switch

The far-sighted flexibility of the Viewline design concept makes a high degree of installation freedom. This makes switching or upgrading to Viewline always a smooth and straightforward process. We offer a reliable, advanced solution for instruments in this range. As an experienced and trusted partner to leading manufacturers of special vehicles and machinery, we are on hand right from the planning stage to enable seamless integration and optimum utilization of all Viewline benefits.

Long-term benefits with new technologies

During development of the Viewline instrumentation range, our focus lied firmly on the requirements of manufacturers. The result is a cross-platform standard that offers maximum freedom in cockpit design.

Certified quality and innovative technology

Viewline is a comprehensive range of state-of-the-art modular instruments for engine monitoring. Featuring more functions and greater flexibility in terms of installation and design, Viewline increases the scope for creative cockpit design. High quality workmanship and engineering excellence allow for outstanding reliability and readability.

Flush or panel mounting

All Viewline instruments can be conveniently inserted in the instrument panel from behind. It is possible to install the instruments with modular bezels or to integrate them flush with the panel without a bezel. This allows high flexibility for cockpit customization and creates opportunities for numerous design variants.

Anti-fog, water resistant

Electrical devices designed for special vehicles and machinery used under extreme conditions need to be carefully protected. That is why every Viewline instrument casing is made from corrosion-proof materials and has a front face that is hermetically sealed in compliance with the IP 67 standard. Anti-fog double lenses in shock-resistant plastic are also available on request. Irritating reflections are practically eliminated and water resistance is increased. The domed construction also makes possible that rainwater flows off quickly even when instruments are mounted horizontally.

LED illumination and warning lights

Viewline instruments are fitted with highly visible, high intensity LED warning lights. These ensure that critical operating states can be quickly and safely detected before quickly. In the case of multifunctional speedometers and rev counters, the Viewline platform allows instruments to be equipped with up to five warning lights. All Viewline instruments feature LED illumination for the LCD display, dial face, and needle.

Clip-on bezels

The modular bezel concept offers true design flexibility in the layout of instrument panels. The three attractive designs in black, white or chrome are suitable for every machinery instrument panel or special vehicle cockpit. The range also includes bezels with flat, round, and triangular profiles. Each of the bezel designs is compatible with every Viewline product.

Cutaway showing double lens

Highly visible LED warning lights

Bezels: choice of color and design

Liquid crystal display

In addition to an analog needle showing speed or engine revs, the new Viewline speedometer and rev counter instruments also feature an additional digital display.

- Display size 37 x 11 mm
- Quick, reliable access to additional data
- Optimized reading angle and display layout
- Displays for speed or engine revs
- Additional monitoring functions available on LCD
- Individual function selection via external control button

Full backlight technology

All Viewline instruments benefit from fully backlit dial faces and needles.

- Optimum contrast and superb readability of the display when lit
- Attractive display at night thanks to clear dial face design

Signal inputs

Viewline supports the following signal inputs:

- Standard speedometer and rev counter signals
- Second frequency input (optional)
- Standard signals for engine monitoring and onboard electrical system
- Signal inputs for special senders
- Up to five switching inputs for warning lights (optional)

Programmable displays

Viewline gives users a choice of different settings and programming options:

- Basic setup via dip switches, internal/external button or PC software
- Various configurable display functions

Sumlog/Depth Sensors

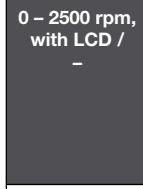

Part number	Description
270-023-004-002K	30 kn, without thru-hull mount
270-023-005-002K	50 kn, without thru-hull mount
X11-719-000-058	Sensor system Triducer Through hull, to measure speed,depth,water temperature
X11-719-000-053	Sensor system Triducer Transmount, to measure speed,depth,water temperature
A2C59513503	Viewline adaptor cable Sumlog/Airmar 8 and 14 pins with connector for Triducer
A2C59514544	Viewline adaptor cable Sumlog/Depth
N05-801-842	Cable for Log Ocean Line Sensor, 10 mt0

1.1.1.d Viewline instrument line | 52 mm Aftermarket-Version

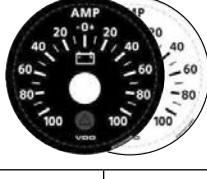

In contrast to the rest of the Viewline program, Viewline Aftermarket is aimed at end customers who wish to replace existing instruments in their boat or vehicle. Each blister-packed set comprises the instrument plus bezel, fastening nut, installation instructions, and wiring harness. Tachometer and speedometers also come with a button.

1.1.1.e Viewline instrument line | 85 & 110 mm Aftermarket-Version

In contrast to the rest of the Viewline program, Viewline Aftermarket is aimed at end customers who wish to replace existing instruments in their boat or vehicle. Each blister-packed set comprises the instrument plus bezel, fastening nut, installation instructions, and wiring harness. Tachometer and speedometers also come with a button.

Part Number	Dial color	Operating voltage	Dial scale	Outer scale		Inner scale		Input	Lens	Bezel

Instrumentation Kits

Due to a huge demand from the market we decided to re-introduce our famous Gauge and Sender Kits. They will be delivered mainly as a “Plug and Play” - System consisting of the recently launched Viewline Gauges complete with the corresponding sender, all necessary cables and comprehensive installation and operation instructions. Only some calibration may be necessary. This “One Box Solution” is the easiest way to equip your boat. All Kits will come in a black and a white version both with round bezel of the same colour.

GPS Speedometer

NMEA2000 Compatible

General Description

This multifunctional instrument with segmented Display is intended for use in marine market, in open boats. Based on the ViewLine housing concept the Cluster provides an ideal IP protection class, a modern appearance and high Quality Standards. It can provide many parameters in NMEA 2000 and several Customization opportunities to meet several demands.

Features

- Embedded GPS Antenna
- Robust and Flexible design for versatile applications
- CAN capability (NMEA2000)
- Pointer for analogue indication
- One Integrated telltale for programmable speed alarm
- Fixed segment LC Display
- Flush mount possibility
- Protection IP67 (front)

Customer-Specific Solutions

In addition to the standard range, the new Viewline instruments also offer OEMs the opportunity to implement solutions to meet their own specific requirements.

Multifunction instruments*

Complementing our tried and tested standard solutions, the Viewline range now also offers the option of multifunction instruments:

- Integration of up to four display gauges in a single 110 mm instrument
- Choose exactly the gauges required
- Integration of up to five warning lights

Generic gauges

The advanced technology used in Viewline makes it possible to process and display a wide variety of sensor sources and mappings, e.g.:

- Current and resistor inputs
- Frequency inputs
- Voltage inputs

Using a second optional frequency input, the combi-instrument can present speedometer and tachometer information in either analog (dial) or digital form (display). Optionally available for:

- 85 mm instruments
- 110 mm instruments

Combi-instruments*

* On request

Small Series Program

As an alternative to our OE programme, custom solutions can be offered.

Portfolio

Availability of OE portfolio

- Available in a number of variants
- Exception: Viewline EHC (possibly following later)

Differences to OE portfolio

- 52 mm with a deflection angle of 90° are linearized and spread over 240°

Further facts in a glance

- Minimum order quantity per variant: 50 pcs.
- Just 10-packs (bulk)
- There are no one-off costs for the customer
- Not changeable:
 - Hardware components
 - Firm-/Software (while manufacturing)

Individualization

Back color of the dial

- Selectable out of a predetermined range of RAL and Pantone color codes
- Hint: Please inform your customer regarding the UV instability of light and neon colors! Those color codes have been removed from the list.

Adding a customer logo

- The size must conform to the size of the VDO logo
- Up to three colours are possible at one time

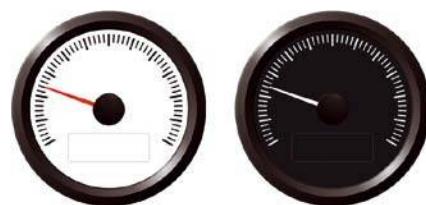

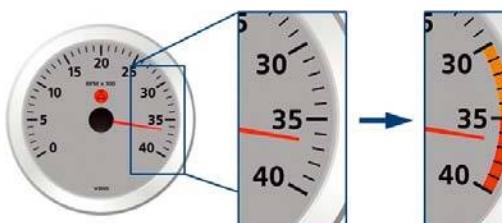

Colored fields in scale (1st Alternative)

- Up to three different color fields are possible, each in a different color
- The fields can be defined by start and end value in the scale
- No backlit

Pointer

- Selectable pointer:
- Red
 - White

Red colored scale (2nd Alternative)

- Up to three red areas are possible (fix color: Pantone 192c)
- The fields can be defined by start and end value in the scale
- Backlit

For more information, please get in touch with your usual contact person.

Modulcockpit II

Versatile and adaptable

VDO Modulcockpit II is a modular system designed with real-world requirements in mind that can be adapted for many different types of applications. The instruments in this series can be installed in any combination with a choice of dual- or quad-instrument housings. Transmitted light technology enables the best possible contrast, even at night. The housings are made of rugged black plastic with low-reflection, scratch-resistant lenses.

VDO Modulcockpit II can be connected quickly and easily via a central connector. Available in 12 and 24 volt versions, it is equally suitable for both on-road and off-road use.

Modulcockpit II:
Dual- and quad-instrument housings in rugged plastic allow flexible combinations of instruments

Analog Clusters

1.2 Centrobase 500

* Only available for series production applications on request

Analog Cluster*

Centrobase 500

The Centrobase 500 instrument clusters allow all relevant engine data (analog and digital) to be presented clearly on a central display, thus enabling greater convenience and enhanced ergonomics in the driver's cab. Centrobase 500 is continuously adapted and updated to meet customer requirements. Dials can be adapted to meet individual customer requirements in terms of scaling, icons, and design.

Our Centrobase 500 instrument stands out for their efficiency, flexibility, quality, reliability, and ease of use.

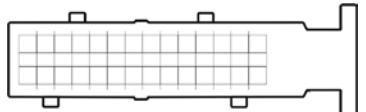

Intelligent instrument cluster with central connector and compact housing

1.2 Analog Clusters* | Centrobase 500**Centrobase 500**

Handle complex requirements with ease.

The VDO brand is synonymous with customised solutions that handle sophisticated technical tasks while offering maximum ease of operation. VDO products are deployed in a wide range of applications from construction vehicles, agricultural and forestry equipment to stationary machines, sports cars and boats.

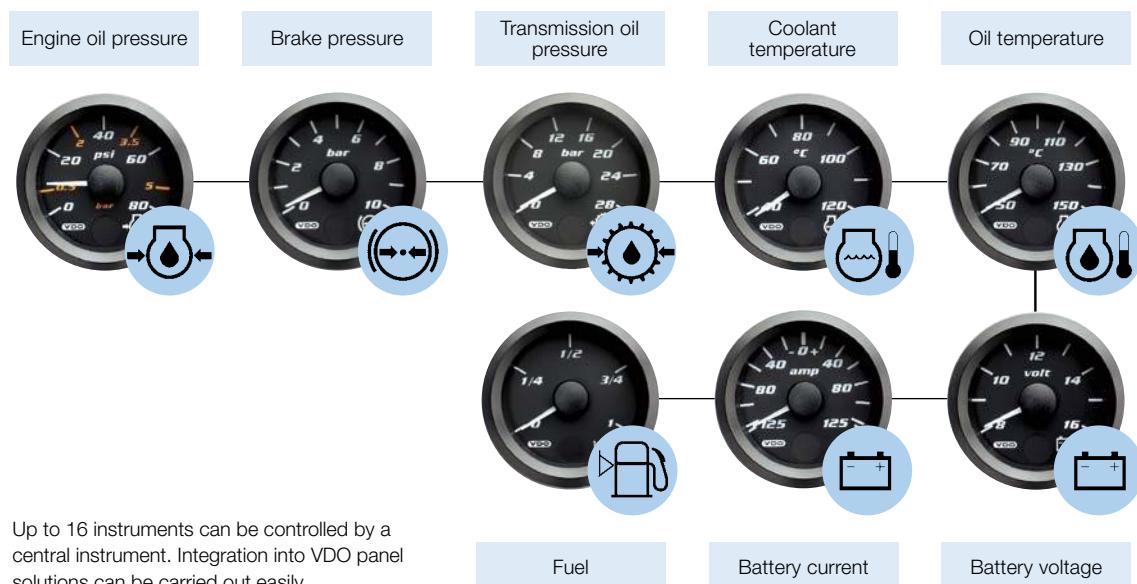

CANcockpit is the flexible system solution for processing data from various analogue and digital sensors via

a central instrument connected to a CANbus. It can be precision configured to meet specific needs, and is simple to expand whenever required. In addition, this modular instrumentation solution may be integrated into existing VDO panel solutions. Thanks to the powerful WINgauge software it is exceptionally easy to program. CANcockpit is also capable of processing two CAN protocols (e.g. SAE J1939 and CANopen) simultaneously.

CANcockpit – harness the benefits.

- **Flexibility** – Data from up to two CANbuses running different protocols (e.g. SAE J1939 and CANopen) can be processed simultaneously.
- **Safety** – Easy DTC (diagnostic trouble code) handling of the protocol defined by J1939 through comprehensive functionality and setting options.
- **Diagnostic support** – Configuration checking, plus online recording of selected measurement values via recorder function for subsequent download onto PC and evaluation using standard tools.
- **Compatibility** – Analogue, frequency and CAN inputs are available.
- **Integration** – CANcockpit can easily be incorporated into existing VDO panel solutions.
- **Programmability** – Specific thresholds can be set and programmed so that an alarm triggers when they are exceeded.
- **Modularity** – Simple cabling requirements and straightforward subsequent expansion.
- **Convenience** – Automatic plausibility check for the parameters entered and various functional checks carried out by special WINgauge software during input phase.
- **Personalisation** – Flexible LC-display options allow icons to be defined and corporate logos to be displayed.
- **Readability** – Instrumentation designed for maximum clarity.

Variable configuration options.

CANcockpit, the flexible solution for a wide range of applications, offers numerous configuration and expansion options. It is based around a central instrument which can be either a tachometer or a speedometer. The central instrument features two CAN inputs supporting different CAN protocols, two frequency inputs,

three resistive inputs, one 4–20 mA input, plus one 0–5 V input. In addition, it is equipped with two switched outputs, a configurable digital display field, and more.

Three sample standard applications are shown below:

Basic configuration

Sample requirement:

A generator is to be fitted with a tachometer measuring up to 3,000 rpm. There is only one CANbus; the threshold values and settings are clearly defined.

CANcockpit provides the solution:

Once the tachometer has been set up as the central instrument you will have access to the desired tachometer display and the option of viewing other data, e.g. as part of an inspection routine, as and when required. All data can be displayed on the central instrument, allowing you to monitor current engine data at any time without the need for other satellite instruments.

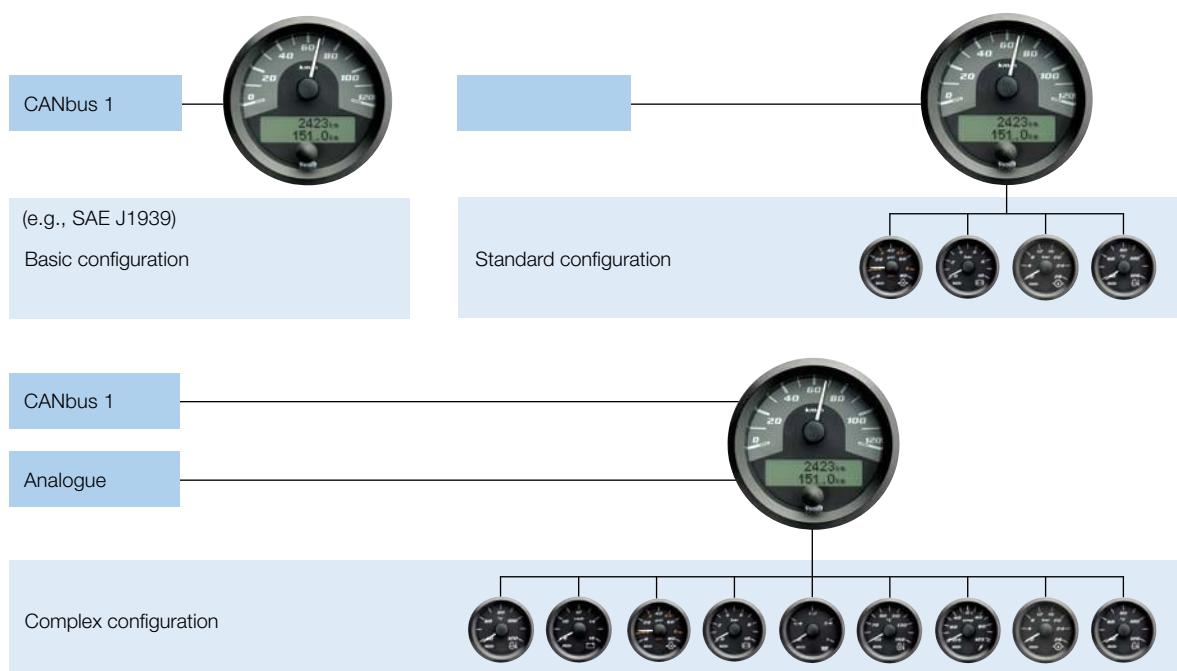

Standard configuration

Sample requirement:

Instrumentation for a digger is one example of a standard configuration using CANcockpit. A tachometer and four more instruments need to be added to a CANbus.

CANcockpit provides the solution:

Once the instrumentation solution has been programmed (a simple procedure), key engine data such as coolant/engine oil/transmission oil temperatures will be displayed alongside rpm and operating hours, plus fuel level – giving you a clear overview of crucial information at all times.

Complex configuration

Sample requirement:

Rigorous safety requirements and different vehicle deployment scenarios (construction sites and public roads) often require complex configurations. One example is a mobile crane, the central instrument of which is to be hooked up to manage nine more instruments. All data comes from analogue sensors and frequency sensors via a CANbus.

CANcockpit provides the solution:

CANcockpit can cover even this complex configuration with ease. The instruments are connected and set, allowing a wide range of physical engine data to be displayed at all times, as well as e.g. hydraulic data (CANopen). For you, this means maximum choice when it comes to putting together the required display instruments.

Technical data

Movement	Stepper motor
Installation diameter [mm]	Central instrument 80, 85, 100; satellite instruments 52, 80, 100
Illumination	Transmitted light, LED, white as standard
Protection rating	IP65 IEC 60.529, front side
Front lens	Glass, anti-reflective
Bezel	Plastic, black, triangular as standard
	Options (not yet available): Triangular profile in chrome, round profile in black
Connectors	Central instrument: Mate-N-Lok 4-pin and MODU II 26-pin
	Satellite instruments: Mate-N-Lok 6-pin
Viewing angle	Approx 210° for central instrument, 240° for satellite instruments
Warning lights	In each satellite instrument
CAN inputs	2 x (e.g., SAE J1939, CANopen)
Frequency inputs	1 x Hall, 1 x universal
Analogue inputs	3 x resistors, 1 x 4–20 mA, 1 x 0–5 volts
Outputs	2 x switching outputs, 0.5 A
Operating voltage	12–24 volts (min. 10.5 volts, max. 32 volts)
Installation position	Central instrument no restrictions, satellite instruments 0–85°
Operating temperature	-40°C ... +85°C, LCD has limited readability below -20°C and above +70°C
Storage temperature	-40°C ... +85°C

For further information about VDO, please visit our website: www.vdo.com

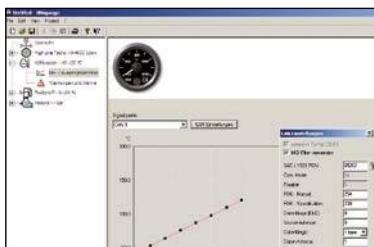

WINgauge – flexible configuration software

WINgauge has been specially developed for CAN-cockpit. This software enables the convenient and flexible configuration of individual instruments or a complete series of instruments. In addition to maximum functionality and customisable programming, WINgauge offers maximum ease of operation. VDO

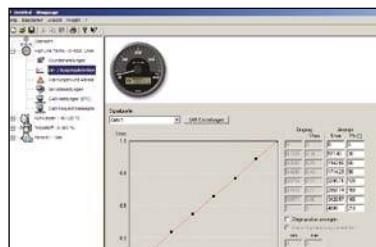

also offers training to help you program a CANcockpit solution. This training tells users everything they need to know about the innovative features, such as how to personalise the system and integrate corporate logos and symbols into the central instruments display.

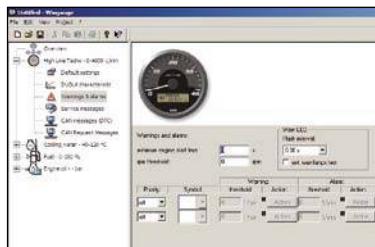

Selecting the central instrument and basic settings

Setting the basic CAN settings (if applicable)

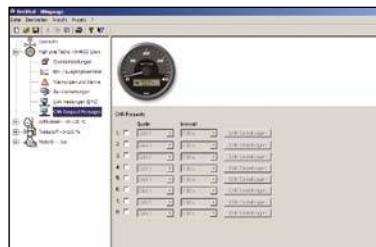

Sensor database and mapping adjustments for optimum performance

Setting warnings and alarms including choice of response and priorities

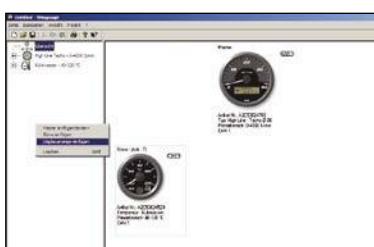

DTC handling and personal configuration with individual messages and symbols

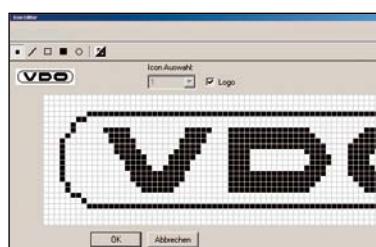

Programming of requests, e.g. query operating hours

Adding satellite instruments

Adding display gauges

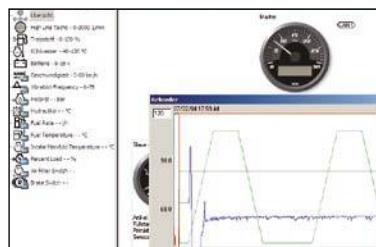

Programming the central instrument, e.g. with a proprietary logo or symbol

The individual project is now programmed

Numerous diagnostic options are available

Capturing, storing and processing selected data by connecting to a PC

* Only for trained
partners

1.3.1 CAN Instruments | **CANcockpit***

VDO CANcockpit is a flexible system solution for processing data from various analogue and digital sensors via a master instrument. It can be configured specifically to suit individual requirements and easily expanded or integrated into existing VDO panel solutions whenever required. The instrumentation boasts a modular design and is particularly easy to program thanks to the powerful WINgauge software. VDO CANcockpit is capable of processing two CAN protocols (e.g. SAE J1939 and CANopen) at the same time, and can control up to 16 instruments via a central instrument.

Ocean Link

Plug & play – the fastest way to access precision engine data.

Engines on modern sports and leisure boats increasingly feature electronic management. To meet these new requirements, VDO now boasts a modular instrumentation concept for marine application: Ocean Link. The main element and information powerhouse is a multifunctional tachometer with direct access to the CANbus controlling the engine. The instrument can display and forward all available data to up to 20 additional satellite instruments. Installation follows the practical plug & play principle, making further system expansion particularly convenient, with no need for complicated programming. Ocean Link has already established a successful track record with leading engine manufacturers.

Ocean Link – Explore the date horizon

The central instrument automatically presents all the key data – up to 256 standard measurement values ranging from oil pressure and fuel consumption to operating hours – on a generously proportioned digital display. Besides a CAN interface with SAE J1939 data protocol it features two inputs for analogue sensors. The innovative Easy Link data connection renders complicated cabling unnecessary. The CAN interface also allows a second central instrument to be hooked up for positioning on the flybridge, for example. Satel-

lite instruments for further dynamic measurement values receive updates from the central instrument every 20 ms. Ocean Link is available in various designs, including a range of installation dimensions and metric and imperial scales. The instruments can also be conveniently integrated into customer-specific panel solutions.

Max. no. Satellites		Max. 20 gauges and 20 m cable length connected to central instrument
Current consumption	120 mA without, 140 mA with illumination	<70 mA with illumination
CANbus	SAE J1939 protocol	Easy Link bus uni-directional from central instrument to satellite
Power supply	10 V – 30 V	

1.3.2 CAN Instruments | Ocean Link

Important data is displayed automatically on the large digital display. As many as 20 different parameters, such as oil pressure, fuel consumption, and operating hours, can be displayed on additional peripheral instruments. In addition to a CAN interface running the SAE J1939 data protocol, the master instrument also features two inputs for analog sensors. The innovative serial data link makes complex cabling a thing of the past. All instruments can be easily integrated into customer-specific instrument panel solutions.

Centrobase 350/400

The new CAN-capable multifunctional solution.

Instruments are very important sources of information for drivers. We offer remarkably robust and reliable instrumentation solutions that are tough enough to handle the environmental conditions in which specialty and utility vehicles operate. They always enable the driver to view all key vehicular data at a glance.

A versatile, multifunctional instrument for many applications.

Centrobase 350/400 is a multifunctional instrument featuring an LCD display. It is designed for construction, farming and forestry machinery, stationary equipment and similar applications. Building on the proven design of the Viewline housing, this instrument is developed according to very high standards of quality. Featuring a modern look, it offers the perfect front-sided

IP protection. Its compact design enables the driver/operator to monitor many parameters simultaneously. Several options are available to customize the instrument to the customer's needs.

Centrobase 350

- Robust and flexible design for versatile applications
- Pointer for vehicle speed or engine speed indication

- CAN capability e. g. SAE J1939
- Protection in accordance with IP 67 (front)

Centrobase 350

CAN-capable Multifunction Solution

This multifunctional instrument with segment display is intended for use in construction and agricultural equipment, marine applications and similar. Based on the Viewline housing concept, the cluster provides an ideal IP protection class, a modern appearance and high quality standards. It allows monitoring of many parameters in a compact design and there are several customization opportunities to meet specific customer demand.

Technical data

Dimensions:	Installation diameter: 110 mm External diameter: 126 mm Installation depth: 50 mm (1.97 in) (top mounted, without connector) 59 mm (2.32 in) (flush mounted without connector)
Nominal voltage:	12 VDC
Operating voltage:	8.5 to 16 VDC
Operating temperature:	-20 °C (-4 °F) to +85 °C (+185 °F); -20 °C (-4 °F) to +70 °C (+158 °F), plated bezel (chrome)
Storage temperature:	-40 °C (-40 °F) to +85 °C (+185 °F) -40 °C (-40 °F) to +70 °C (+158 °F), plated bezel (chrome)
Analog indication:	Analog gauge with a max. deflection angle of 230°, e. g. speed indication or engine speed indication
LC-display:	Viewing area: 37 x 11mm 6 x 14 segment indication usable for several functions, e. g. engine hours counter, odometer, trip distance, speed and supply voltage
Warning lamps:	Max. 7 tell-tales, configurable (LED colour and ISO symbol)
Interfaces:	CAN: 1x (CAN 2.0B, e. g. SAE J1939) Analog: up to 12 x Digital: up to 16 x
Internal buzzer:	630 Hz and 1100 Hz / 60 dB at 10 cm distance
Mounting/fixing:	Diameter: 110 mm (housing diameter) Top mount: Clamp ring or Studs and bracket Flush mount Fixing Bracket
Nominal position:	According to DIN 16257 NL 0 to NL 85
Protection class:	According to DIN 60529 Front: IP 67* Back: IP 40*

Centrobase 400

Manufactured to fit every demand!

The instrument can readily be adapted to match specific requirements. Our customizing options go beyond front rings and face layouts. We can also adapt application-driven CAN messages, the values of threshold and warning indicators, illumination colors and display contents to suit the customer's requirements.

Technical data

Dimensions:	Installation diameter: 110 mm External diameter: 126 mm Installation depth: 50 mm (1.97 in) (top mounted, without connector) 59 mm (2.32 in) (flush mounted without connector)
Nominal voltage:	12 VDC
Operating voltage:	8 to 16 VDC
Operating temperature:	-20 °C (-4 °F) to +85 °C (+185 °F); -20 °C (-4 °F) to +70 °C (+158 °F), plated bezel (chrome)
Storage temperature:	-40 °C (-40 °F) to +85 °C (+185 °F) -40 °C (-40 °F) to +70 °C (+158 °F), plated bezel (chrome)
Analog indication:	Analog gauge with a max. deflection angle of 230°, e. g. speed indication or engine speed indication
LC-display:	Viewing area: 46 x 23 mm (1.81 x 0.91 in) 3-line segmented display with: <ul style="list-style-type: none"> • 6 x 7 segment indication usable for up to four functions, e. g. engine hours counter, odometer, trip distance and battery voltage • 2 x 12 bar graph segments, e. g. coolant temperature and fuel level
Warning lamps:	Up to 27 tell-tales
Interfaces:	CAN: 1x (CAN 2.0B, e. g. SAE J1939) Analog: up to 12 x Digital: up to 16 x
Internal buzzer:	630 Hz and 1100 Hz / 60 dB at 10 cm distance
Mounting/fixing:	Top mount: bezel or bracket and studs Flush mount: clips
Nominal position:	According to DIN 16257 NL 0 to NL 85
Protection class:	According to DIN 60529 Front: IP 67* Back: IP 40*

* Nominal position

* Only available for series production applications on request

FlexCluster

Countless Tasks. One Solution

Our products always meet the highest standards with regard to quality, durability, and aesthetics, but the FlexCluster indicating instrument offers even more: maximum functionality in every respect.

Maximum flexibility: The tried and tested Gateway feature allows data to be processed from two different CAN buses running different protocols (e.g., SAE J1939 and/or CAN Open). This enables flexibility in use and ensures that all important data and information can be transmitted to other control units.

Additional peripheral instruments, from oil pressure through fuel consumption to operating hours, can also be controlled via the FlexCluster. Accordingly, all data required for vehicle operation can be displayed.

Maximum safety: The FlexCluster indicating instrument provides a large number of customizable settings. DTC (Diagnostic Trouble Code) handling in accordance with the SAE J1939 protocol is thus made extremely simple. A back-up system ensures that the integral real-time clock is not affected if there is a loss of power.

Maximum compatibility: Maximum compatibility is guaranteed thanks to a wide array of analog and digital frequency inputs in conjunction with multiple CAN inputs.

Maximum individuality: The layout of the central dot-matrix display is fully customizable and can even be programmed to show personalized icons and corporate logos. All warning lights can be individually customized in terms of shape and color. There is also a range of options for the dials and bezels.

Maximum ergonomics: The best possible ergonomics are guaranteed with this space-saving design. It not only enables optimal readability of the instruments but also helps to increase comfort levels in the driver's cab.

Maximum spontaneity: Thanks to a specialized software, the FlexCluster indicating instrument can be programmed and configured to precisely meet any customer requirements. For added convenience, the self-explanatory software allows customers to implement changes themselves as and when required.

Maximum robustness: The extremely high protection rating (IP 67) of the housing means that the FlexCluster is suitable for continuous use under the most extreme conditions of heat/cold, moisture, vibration, etc.

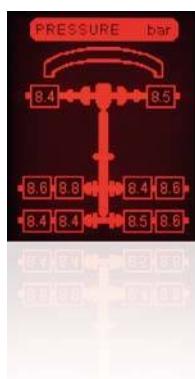

Specifications:	
Dimensions (mm):	290.6 x 143.5 x 72.5
Nominal voltage:	12 V or 24 V
Supply voltage:	9 V to 16 V or 18 V to 32 V
Operating temperature:	-40°C to +75°C
Protection degree:	IP 67 front side and rear side
Features:	
Appearance:	Black dial with red pointers, multicolor printing Customization of dial, teletales, screening rings and HMI possible
Illumination:	white backlight and amber colored display illumination, dimming via PVM
Gauges:	4 gauges (2x large, 2x small) e.g. Speedometer, tachometer, fuel level, coolant temperature or air pressure
Display:	Dot matrix LCD, technology: FSTN Resolution: 115 x 145 Active area: 65.23 x 51.73 mm
Telltale:	24 + 2 (placed near small gauges)
Wake-Up:	CAN or term 15
EOL programming:	KWP2000 on CAN
Analog input (resistive/voltage):	6 (2 can be used as voltage input)
Digital input:	24
Frequency input:	4
Current input:	1
Output:	3 x 500 mA Output can be used as frequency or digital output (Low side switch)
External buzzer output:	1
D+ Generator load:	1 (150 Ω pull up @ 24 V or 53 Ω pull up @ 12 V)
Interfaces:	2 x CAN, 1 x LIN 1 x for additional gauge satellites
Connectors:	2 x Tyco Super Seal (35 pin and 23 pin) In-mold with back cover

This solution offers significant design flexibility in order to realize vehicle functionality and end-customer needs, including enhancing or changing features during the vehicle's lifetime. With a special application programming software, we offer our customers a powerful, established tool for simple programming.

The FlexCluster indicating instrument was specifically developed to withstand the harsh conditions associated with special-purpose vehicles.

With four instrument dials in an ergonomically optimized layout, 26 configurable warning lights, and a large dotmatrix display, the FlexCluster indicating instrument

is one of the most advanced system components available to the special vehicle manufacturers today. The extensive customization options allow the system to meet even the toughest requirements, while also providing an optimal combination of individuality and value for money.

2. Sensors and Switches

* Only available for series production applications on request

2.1 Speed and RPM Sensors

- 2.1.1 Blocking Oscillator Sensor
- 2.1.2 Inductive Sensor
- 2.1.3 Hall-Effect Sensor
- 2.1.4 Generator Sensor
- 2.1.5 Active Wheel Speed Sensor

2.2 Pressure Sensors

- 2.2.1 Pressure Sensor, Single-Pole, Common Ground
- 2.2.2 Pressure Sensor with Warning Contact, Common Ground
- 2.2.3 Pressure Sensor, Insulated Return
- 2.2.4 Pressure Sensor with Warning Contact, 3 Connections

2.3 Pressure Switches

- 2.3.1 Pressure Switch, Single-Pole, Common Ground
- 2.3.2 Pressure Switch, Insulated Return

2.4 Temperature Sensors

- 2.4.1 Temperature Sensor, Single-Pole, Common Ground
- 2.4.2 Temperature Sensor, Dual-Pole, Insulated Return
- 2.4.3 Temperature Sensor with IP Connector
- 2.4.4 Temperature Sensor with Warning Contact
- 2.4.5 Temperature Sensor for Air Temperature
- 2.4.6 Temperature Sensor (Special version)
- 2.4.7 Pyrometer Sensor

2.5 Temperature Switches

- 2.5.1 Temperature Switch, Single-Pole, Common Ground
- 2.5.2 Temperature Switch, Dual-Pole, Insulated Return

2.6 Liquid Level Switches

- 2.6.1 Liquid Level Switch, Linear Type, Oil/Diesel
- 2.6.2 Liquid Level Switch, Lever Type, Water

2.7 Customer-Specific Solutions Sensors for Engine Management Systems*

- 2.7.1 Intake Air Pressure Sensors (MAP, T-MAP)
- 2.7.2 Mass Airflow Sensor (MAF)
- 2.7.3 Knock Sensor
- 2.7.4 Crankshaft Position Sensor
- 2.7.5 Camshaft Position Sensor

Sensors and Switches

Sensing and forwarding information

A wide variety of information is required to ensure reliable, safe and efficient vehicle operation. Sensors capture and transmit the necessary data. To fulfil this task, they need to be resistant to temperature, moisture, dirt and chemicals.

So that the information provided is as reliable as possible the sensors also need to function perfectly with electromagnetic fields and in the presence of other sensors, in addition to offering a long service life. Sensors can help cut fuel consumption and harmful emissions. They play a part in boosting engine efficiency and vehicle safety to enable greater driving comfort and enjoyment.

Detective sensors can lead to engine management faults and in worstcase scenarios cause engine damage.

Temperature Sensor with IP connectors (NTC-Technology)

NEW

General Description

Sensors for electronically controlled safety functions are the eyes, ears and the antenna of a modern-day high-tech vehicle. Nothing escapes them – neither lowest temperature deviations inside cooling systems nor monitoring of engine and gear oil temperature.

Intelligent safety systems are inconceivable without them.

Application

Temperature sensors based on NTC-Technology are used in vehicles to record the temperature of oil, water or fuel and to forward the measurement result to ECU. The engine powertrain management system uses a number of temperature inputs to improve the performance of the engine, control emissions, fuel control and optimize efficiency.

Operating Principle

Temperature Sensor based on NTC-Technology (**Negative Temperature Coefficient**). It is a semi-conductor which changes the resistance value according to temperature deviation. This resistance value as output value is rather indication of media medium temperature.

Key Features

- Wide range of applications
- High accuracy
- Long-term stability
- Certified quality
- High worldwide volume production

Applications

- Engine management
- Fan Control
- Temperature Display

2.4.7 Pyrometer Sensor

Dimensions of sensor (mm):

<p>The diagram illustrates the physical dimensions and components of the Pyrometer Sensor. Key dimensions include a total length of 305 ± 10 mm, a sleeve length of 95 ± 10 mm, a compensating wire length of 55 ± 10 mm, a hexagon length of 40 mm, and a flange width of 98 mm. The sensor features a V-ring bolting (B) at the top, a sleeve with sheathing (C) and break protection spring (D) in the middle, and a thermocouple assembly (E, F, G, H, J, K, L) at the bottom. The cable lug (J) is labeled 'red (-)' and the screw (K) is labeled 'yellow (+)'.</p>	
A Thermolelement: NiCr-Ni DIN 43710 (with casing insulation)	F VA wire wounding
B V-ring bolting	G Rubber grommet
C Sleeve with sheathing, brazed	H Compensating wire: NiCr-Ni, 2x 0,5 mm ²
D Break protection spring	J Cable lug (2x):DIN 46237 3,5
E Heat shrink tubing	K Screw (2x): M3 x 6
	L Lock nut: M3

Part Number

N03-320-264

Dimensions of connecting cable:

<p>The diagram shows the dimensions of the connecting cable assembly. It consists of two spade connectors (6,3x0,8 DIN 46247 Ms / Brass) connected by a PVC insulating sleeve. The total length of the cable is 5960 ± 15 mm. Key dimensions include a white wire diameter of 0,5-0,75 mm², a blue wire diameter of 14 ± 5 mm, a total cable length of 75 ± 5 mm, and a spade connector thickness of 40 ± 5 mm. The cable is terminated with two spade connectors and a PVC sleeve.</p>
Part Number
N03-320-268

Dimensions of threaded bushing (steel) for welding to manifold:

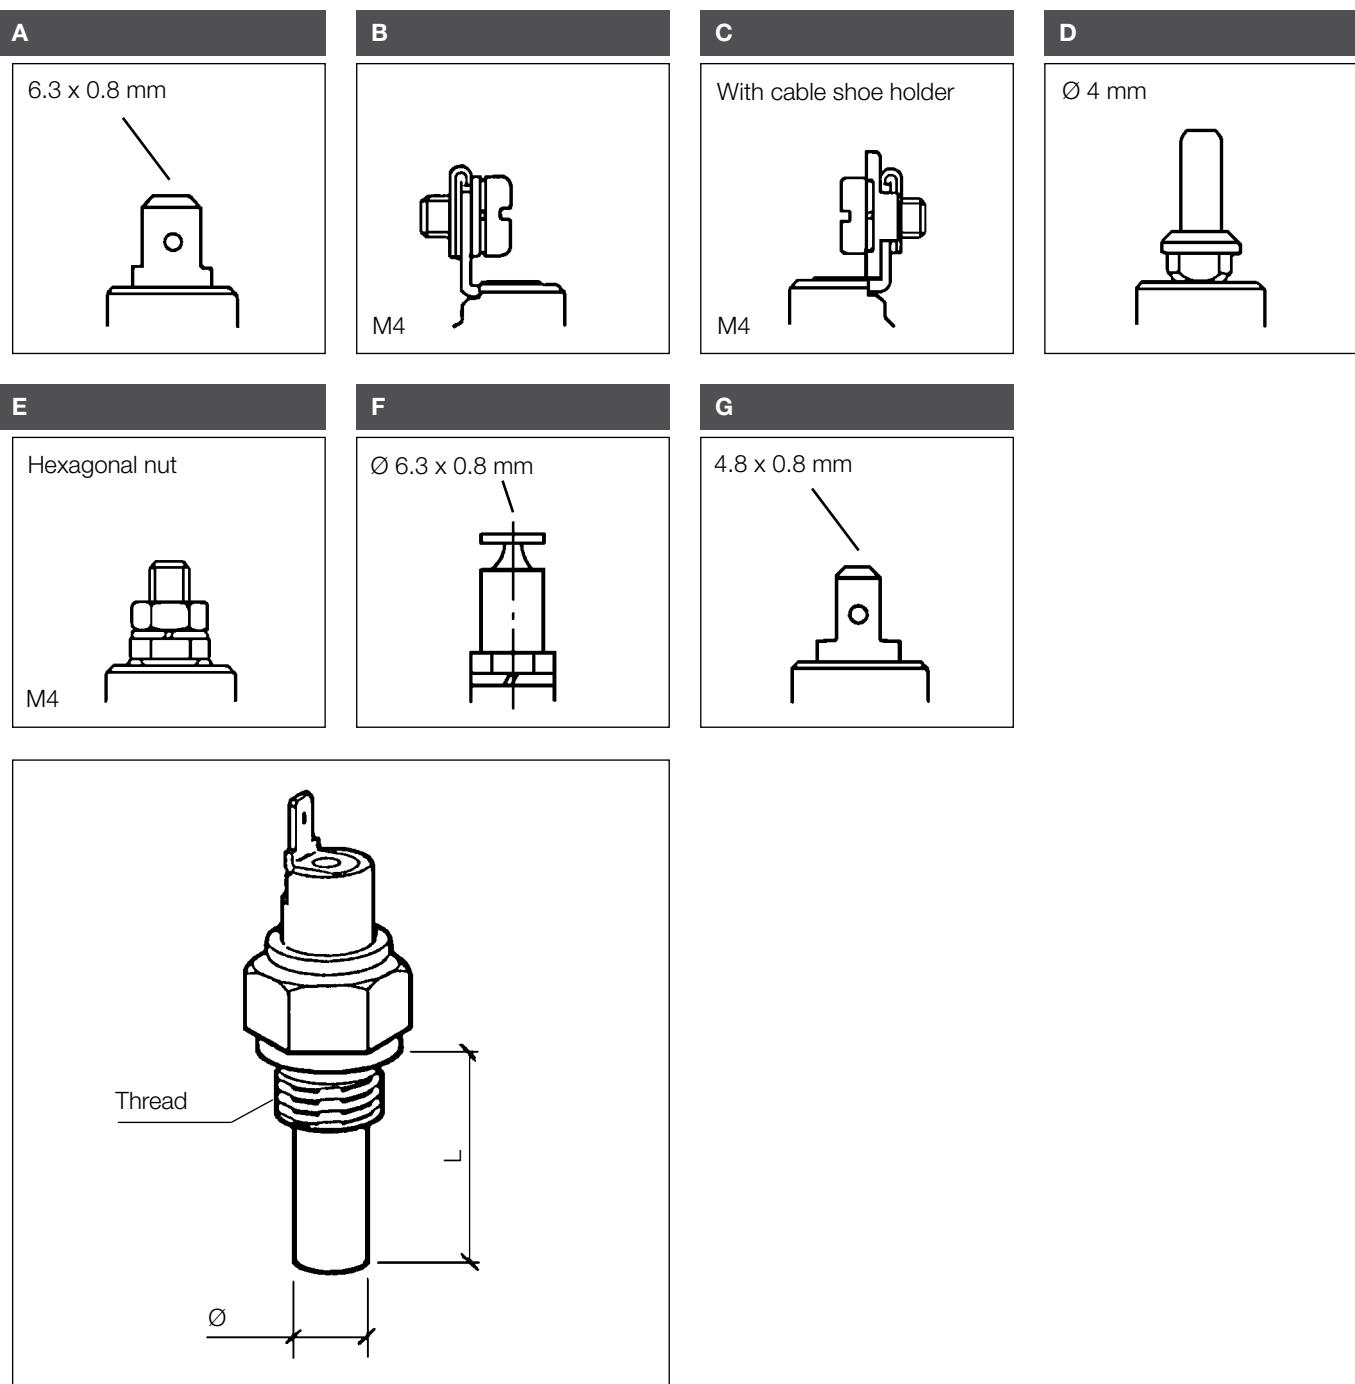

<p>The diagram provides the dimensions for the threaded bushing (steel) used for welding to the manifold. The bushing has an outer diameter of R 1/4 and an inner diameter of 19,5 mm. The total height of the bushing is 17,5 mm.</p>
Part Number
N03-320-266

Intake Air Pressure Sensors (MAP, T-MAP)

Temperature and absolute pressure sensors, 1 to 5 bar

Our innovative sensors help to meet increased global requirements with regard to enhanced performance, as well as current and future emissions regulations. Absolute pressure sensors are used to measure air pressure in different applications throughout the vehicle.

Operating principle

Our absolute pressure sensors are based on micro-machined silicon sensing elements, which deflect under load to generate a ratiometric voltage that corresponds to the incident pressure. This signal is in turn amplified and temperature-compensated according to a fully configurable digital calibration.

Applications

- MAP (**Manifold Absolute Pressure Sensor**): Measurement of intake air pressure in order to measure air flow, which is an important variable in calculating the volume of fuel to be injected and, in turn, for optimization of the air-fuel mixture.
- T-MAP (**MAP Sensor with integral Temperature Sensor**): Measurement of intake air pressure and temperature in order to measure air flow, which is an important variable in calculating the volume of fuel to be injected and, in turn, for optimization of the air-fuel mixture.
- Turbo MAP (**Manifold Absolute Pressure Sensor for Turbocharged engines**): Measures air pressure, for example, downstream of the turbocharger
- Turbo T-MAP (**Turbo MAP Sensor with integral Temperature Sensor**): Measures air pressure and temperature, for example, downstream of the turbocharger
- BAP (**Barometric Absolute Pressure Sensor**): Measures barometric air pressure
- BPS (**Brake Pressure Sensor**): Measures air pressure in brake servo systems

Mass airflow sensor

A growing focus on reducing CO₂ emissions means that mass airflow sensors are becoming increasingly important in ensuring the optimum air fuel ratio. Mass airflow sensors are positioned directly after the air filter in the intake manifold and supply information on temperature, humidity, and intake air volume.

Despite their highly compact construction they feature precision technology to capture information which – , together with other engine data – enables optimum engine management.

This data includes:

- Intake air temperature
- Intake air humidity
- Intake air volume

In gasoline engines, mass airflow measurement is used in conjunction with other sensor readings to regulate the supply of fuel to the engine.

In diesel engines, mass airflow sensors are used to regulate the exhaust gas recirculation rate and calculate the maximum injection quantity.

VDO mass airflow sensors are exceptionally reliable and highly capable of withstanding environmental factors. Their dynamic measurement ability makes an important contribution to reducing vehicle emissions.

Mass airflow sensor

* Only available for series production applications on request

Knock sensor

Modern engines which allow high compression ratios have a distinct disadvantage: their design leads to increased knocking, which can damage the engine. Knock sensors reliably measure the vibration of the engine block that is characteristic of engine knocking. This allows the firing angle and other parameters to be set such that the engine continues to function correctly close to the knock threshold. This not only protects the engine but also reduces fuel consumption.

To ensure maximum precision, VDO knock sensors deploy groundbreaking bandwidth technology.

Knock sensor

* Only available for series production applications on request

Crankshaft Position Sensor

The crankshaft position sensor supplies information on the crankshaft's current position, which the engine management system can then use to calculate rpm. These values make it possible to determine the most economical fuel injection and ignition timing for a vehicle.

Crankshaft Position Sensor

* Only available for series production applications on request

Camshaft Position Sensor

The camshaft position sensor is located in the cylinder head and reads the camshaft sprocket to determine the position of the camshaft. This information is required for functions such as initiating injection on sequential injection engines, the trigger signal for the magnet valve on pump valve injection systems and for cylinder-specific knock control.

Camshaft Position Sensor

* Only available for series production applications on request

High Temperature Sensor (HTS)

The high temperature sensor also performs a key role in the exhaust gas after-treatment process.

It delivers impressive long-term stability and provides high accuracy temperature measurements with good linearity. The heat-resistant temperature probe has many applications in innovative systems, including:

- Measurement of exhaust gas temperature for optimization of the combustion process
- Measurement of exhaust gas temperature for protection of various components
- Control and monitoring of diesel particulate filter systems

The measurement range extends up to 950 °C. Thanks to its ability to generate a reliable measurement signal under such harsh conditions, this sensor makes it possible to deliver a perfectly controlled fuel supply for combustion in the diesel particulate filter.

Product benefits:

- High precision
- Minimal signal aging across the entire life cycle
- Compact construction allows optional fitment
- Low thermal inertia ensures rapid response characteristics

High Temperature Sensor

Technical Specification:

Response time:	7s @10 m/s (4s @20 m/s)
Sensing temperature:	-40 °C to 950 °C
Working temp. electronics:	-40 °C to 140 °C
Cable temperature capability:	250 °C
Accuracy:	-40 °C to 50 °C ± 10 °C over lifetime 200 °C to 650 °C ± 5 °C over lifetime > 850 °C ± 10 °C over lifetime
Option Supply Voltage (Vs):	24 V or 12 V
Connector:	Tyco HDSCS 4PIN 2.8 connector PN 1-1418390-1 code A
Output:	CAN SAE J1939

* Only available for series production applications on request

Electronic Pressure Sensor (EPS)

The new EPS sensor (Electronic Pressure Sensor) is a high-performance successor to the previous generation of passive, electromechanical sensors. Combining modest weight and dimensions with enhanced precision, the EPS sensor represents the future of pressure sensing.

This innovative device uses the piezoresistive effect, i.e. changes in resistivity, to convert system pressure into a proportional output signal. Depending on the choice of seal material, the EPS sensor offers excellent resistance against a wide range of media, e.g. oil, brake fluid, diesel, petrol and engine coolant. The EPS sensor was specially designed for high-precision monitoring of engine oil, transmission oil, hydraulic and air pressures. In addition to conventional automotive applications, the sensor is thus ideal for off-road vehicles as well as hydraulic

and pneumatic systems. The screw-type fitting can be adapted to individual customer requirements. The sensor connects to the rest of the vehicle electronics via cable and plug.

Product benefits:

- Direct pressure sensing
- Compatible with a wide range of media
- Modular design
- Customer-specific threaded fitting possible
- Customer-specific pressure range possible

Electronic Pressure Sensor

Technical Specification:

Pressure Range:	10 bar ... 200 bar (Al-fitting, crimped connection PSM-to-fitting)
Option Pressure Range:	200 bar ... 600 bar (Stainless steel fitting, welded PSM-to-fitting)
Medium*:	Air, engine oil, gear oil
Supply Voltage (Vs):	18 VDC to 32 VDC
Output Signal:	0.5 V ... 4.5 V
Temperature Range:	- 40 °C to +125 °C
Environmental protection:	IP 6K9K
Electrical Connector Type:	Bayonet according to ISO15170 (formerly DIN 72585)

*Depending on annual volume further media resistances feasible

Part number	Pressure ranges
365-100-010-121C	0 - 10 bar
365-100-016-121C	0 - 16 bar
365-100-030-121C	0 - 30 bar

Differential pressure sensor
(2-port) for particulate filter

Differential pressure sensor (2-port) for particulate filter

The VDO 2-port pressure sensor for diesel particulate filters provides outstanding differential pressure measurement. This sensor is extremely precise and highly reliable under even the most demanding conditions, thanks to back-side sensing.

Using the differential pressure measured between the filter outlet (P1) and the filter intake (P2), the VDO pressure sensor is able to determine with a high degree of precision the actual exhaust gas flow through the diesel particulate filter and therefore the level of clogging in the filter. The sensor generates an analogue output voltage proportional to the differential pressure, which is used as input by the electronic control unit (ECU). If this voltage exceeds a predefined value stored in the ECU, the control unit initiates a regeneration process to burn off the residue in the

particulate filter. This process restores gas flow to the original level, thereby allowing optimal performance to be achieved.

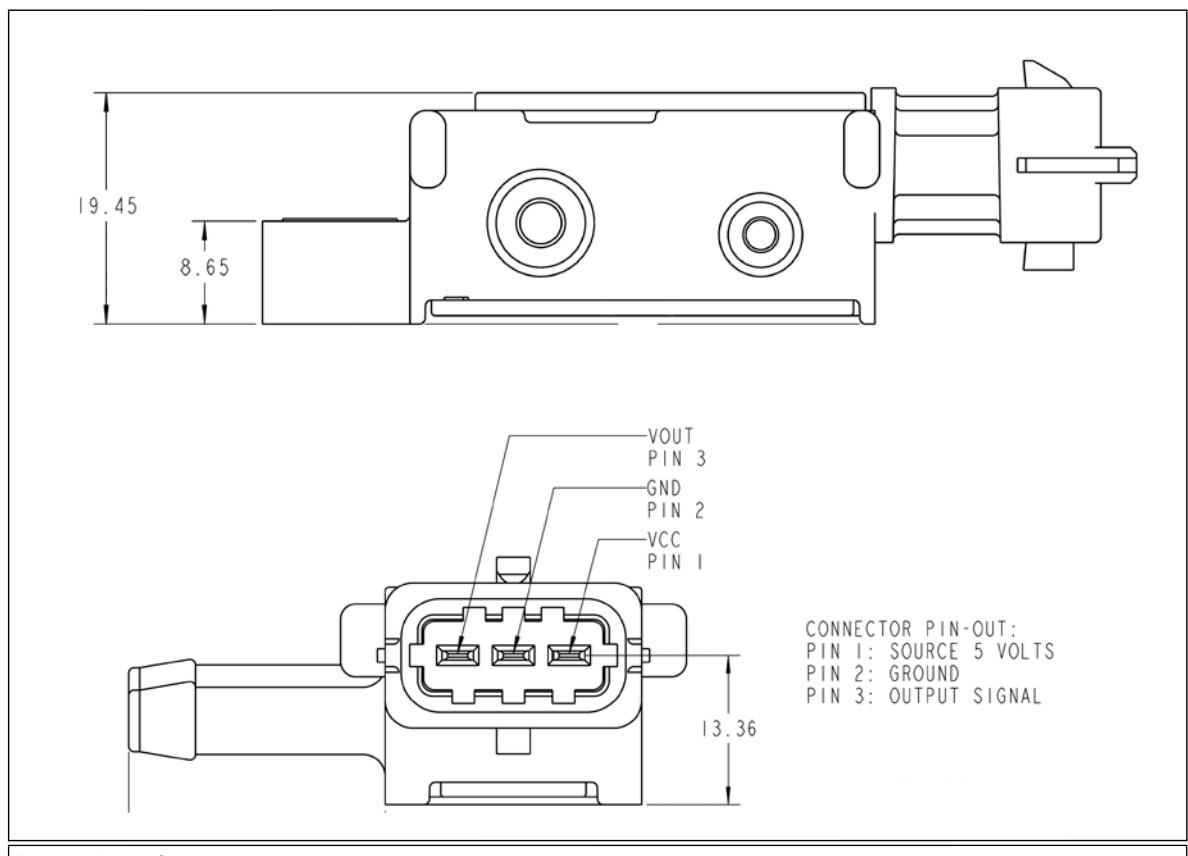

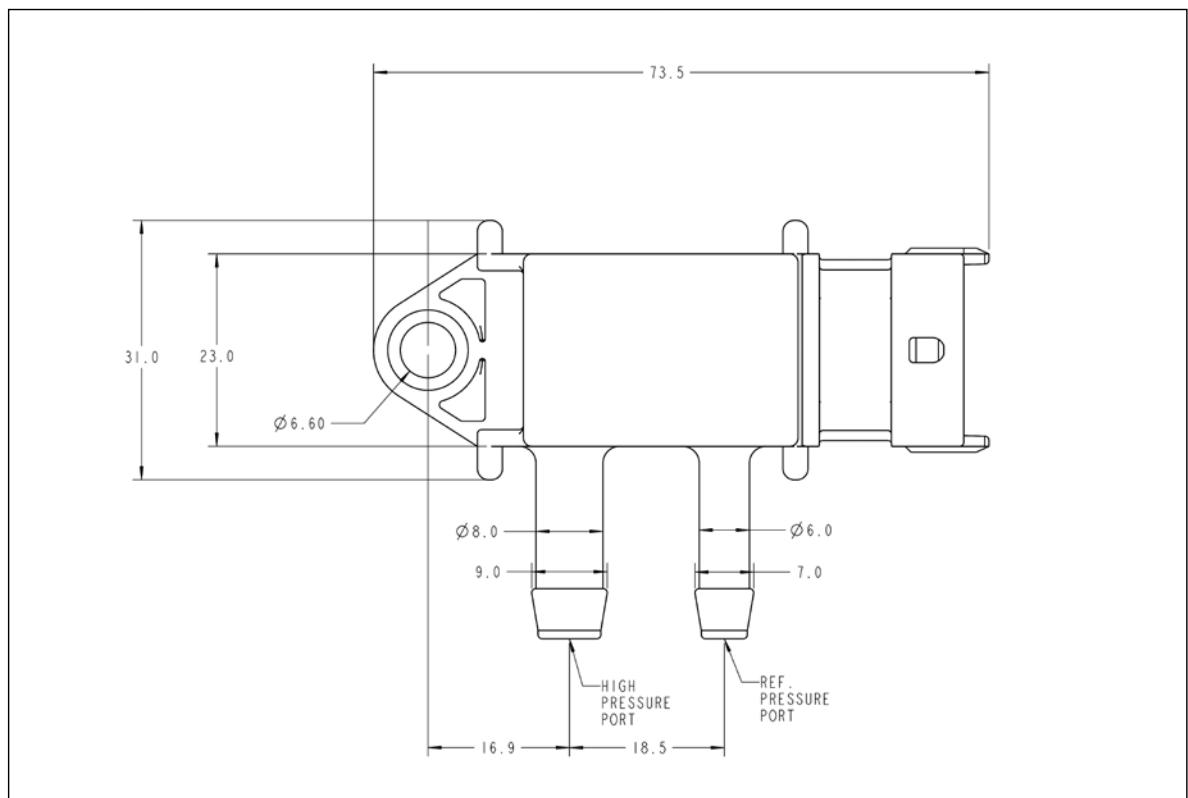

Product benefits:

- Direct pressure measurement
- Suitable for system-internal and emissions diagnostics
- Wide measurement range
- High accuracy and thermal stability
- Excellent dynamic response
- Complies with the strictest EMC requirements
- Resistant to even highly aggressive media

Inertial Sensor

Inertial Sensor

VDO is the world's first manufacturer to combine all the major inertial sensors required in a vehicle in a single unit. Using silicon-based sensors, we've eliminated unwanted frequencies and signal cross-talk while improving resistance to vehicle vibration and extremes in ambient temperature. The resulting inertial sensor is ideally equipped for the exacting demands of specialist vehicle applications.

Performance and safety – sensors for specialist vehicles

Sensors are the eyes and ears of every vehicle. They register every movement, no matter how small, while predicting and preventing hazardous situations long before they occur.

Millions of such sensors are already in use, an integral part of today's intelligent safety systems. The role of inertial sensors is to provide real-time information on rotation rates and acceleration. Those manufactured by VDO are specifically designed for specialist vehicle applications. Having spent many years developing sensors for passenger and commercial vehicles, VDO has the expertise required to make high-precision sensors offering exceptional reliability in the most extreme operating environments. In fact, all the qualities your specialist vehicles require for optimum performance and safety.

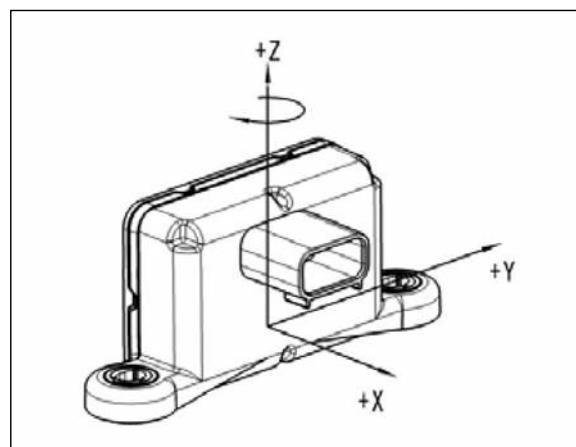

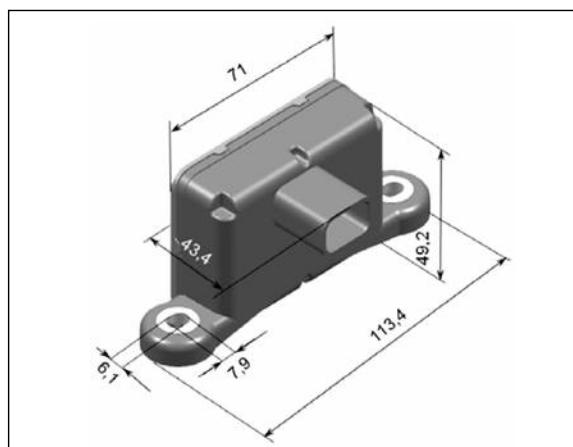

Automated processes – maximum safety

Adapted to the unique requirements of specialist vehicles, the VDO inertial sensor offers many important benefits. Key among these is safety. By actively avoiding hazardous situations, the VDO inertial sensor protects man and machine while also ensuring smooth and trouble-free operation. In addition, the sensor enables greater automation of your working processes, thereby increasing the efficiency and productivity of your vehicles.

Precision, intelligence, reliability – also off road

The VDO inertial sensor provides a continuous supply of all key motion-related data to the rest of the vehicle electronics. The sensor measures the rate of rotation around the vertical axis as well as acceleration on all three axes, i.e. the pitch, roll and yaw acceleration of the vehicle. Data is provided to the relevant control units using the CAN SAE J1939 vehicle bus standards.

When working in hazardous situations, e.g. on steep inclines, the sensor information enables greater control and therefore increases safety. The sensor predicts hazards well in advance, enabling the relevant control systems to respond accordingly, e.g. by reducing vehicle speed or signalling a warning to the driver.

Dimensions [mm]

Part number: A2C59514837

Possible applications

- Roll angle calculation
- Traction control, motion control
- Passenger recognition
- Inclination detection
- Inertial navigation System
- Rollover protection
- Maintenance support functions
- Center of gravity stabilization
- Chassis control
- Curve tracking light

Key Features

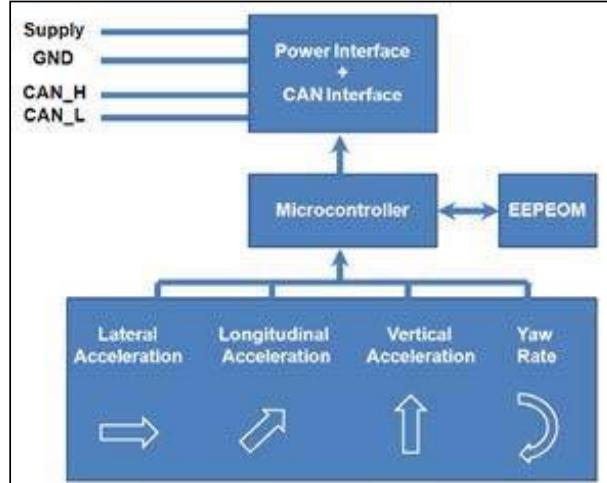

- Measurement directions in x-, y-, and z-axis
- Measurement of angular rate (z-axis)
- Measurement of lateral, longitudinal and vertical acceleration
- Distribution of measurement signals on CAN
- SAE J1939
- Lead free

Additional Information

DIRECTIVE 2000/53/EC

The Sensor Cluster complies with the requirements of the **DIRECTIVE 2000/53/EC** regarding the use of lead and other hazardous substances in electrical components and modules for automotive applications.

UniNO_x

Our innovative sensor is helping to meet global demand for increased performance in the face of current and future emissions regulations. UniNO_x sensor technology represents a welcome aid to automotive manufacturers confronted with ever stricter emissions legislation and the simultaneous need to reduce fuel consumption. This sensor is the product of collaborative development between Continental and NGK Insulators, which leveraged the specific expertise of the two companies in the fields of electronics (Continental) and sensor technology (NGK).

Concept

The UniNO_x sensor comprises a zirconia multi-layer ceramic sensing element in a metal housing, connected to an ECU by a 600 mm long cable.

Like in a linear wideband lambda sensor, electrochemical pumps are used to establish the oxygen concentration in the sensing element. NO_x concentration in the exhaust gas is proportional to the pump current in the sensor element.

Based on the measured physical values, the ECU calculates three output signals (NO_x, binary λ , linear λ). These signals are then transmitted to the engine ECU over the CAN bus.

Benefits

- Modular, stand-alone NO_x sensor
 - Communicates via standard CAN bus interface
 - No ties to suppliers of catalytic converters, electronic control units, and engine management systems.
 - Heating element control and driver stages integrated into ECU
 - Self-diagnostics for short circuit and cable break
- High-precision, calibrated UniNO_x sensor
 - Outstanding combined skills base in electronics and sensor technology thanks to collaboration between NGK Insulators and Continental
 - Over 20 years of experience in sensor technology
 - Designed by experts in sensor calibration and control techniques
- Experienced in series production
 - Used in gasoline engines since 2001
 - Used in diesel engines since 2005

Applications

Manufacturers seeking to comply with existing and forthcoming emissions standards and the associated legislation, such as Euro 5, 6, V, VI, US07 and US10, can rely on the UniNO_x sensor to support them in implementing various types of exhaust treatment system for both gasoline and diesel engines.

Gasoline engines for cars

UniNO_x sensors are used to control the regeneration cycle of NO_x storage catalysts (NSC) in conjunction with lean-burn engines (GDI/FSI/HPDI).

Diesel engines

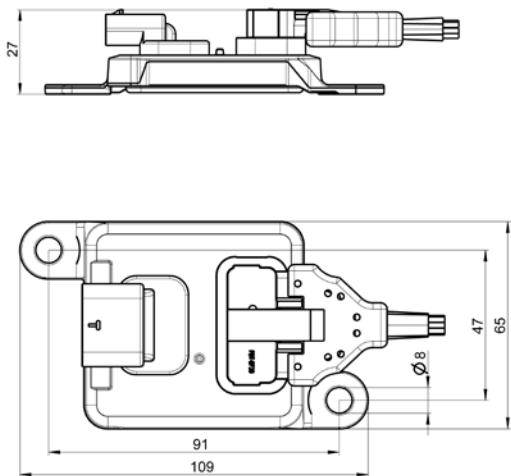

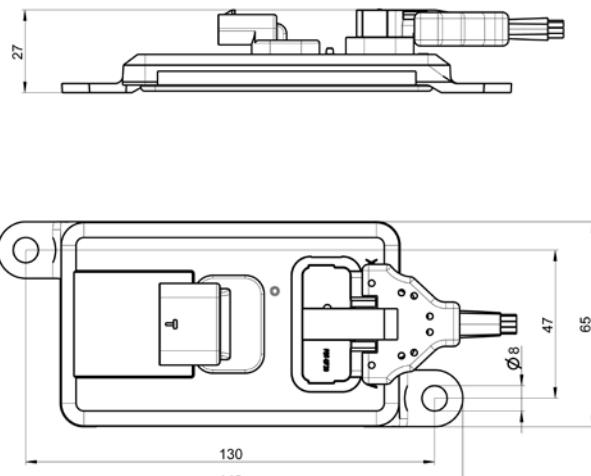

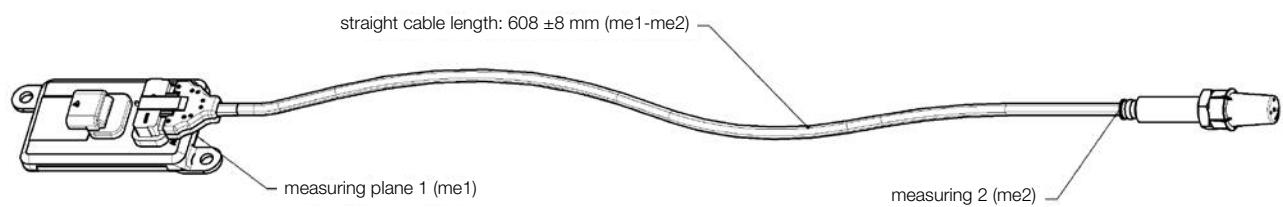

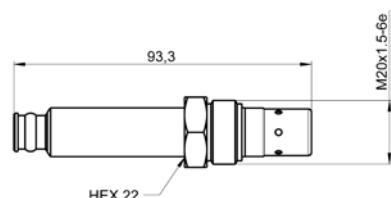

- Cars and vans
 - Control of DEF metering in SCR systems
 - Control of NSC regeneration cycle
 - Can be used for OBD with all exhaust gas treatment systems

- Medium and heavy duty trucks
 - Control of DEF metering in SCR systems
 - Can be used for OBD with all exhaust gas treatment systems

General specification

Measurement	ZrO ₂ -based multi-layer sensor with integrated heater and 3 oxygen pumps
Three output signals	NO _x , binary λ , linear λ or O ₂ concentration
Electrical system	12 V or 24 V
Data link	SAE J-1939
Self-diagnostics	Short circuit and cable break
Operating temperature (gas)	100–800 °C

Fuel and Water Management Systems

Fuel level measurement for commercial and special vehicles

Little deviations can cause a serious full stop – that is certainly the challenge within fuel level systems. In order to support commercial and special vehicles effectively and efficiently, it is essential to provide reliable information about accurate fuel level at each time.

Innovative solutions

Our sensor systems are specifically optimized for a wide range of applications and the often extremely harsh operating conditions encountered. We have been active in this field for over 30 years and along our sensor innovations, like the MAgnetic Passive Position Sensor (MAPPS), we have been extremely successful in increasing the reliability of fuel level measurement systems, even those used with aggressive fuels.

For tanks of all shapes and sizes

Based on our huge range of different designs and measuring principles, we are able to offer solutions for all kind of tank geometries, flange mounting holes (e.g., EU bayonet flange), and fuel requirements. Thanks to the modular nature of the systems, we are also able to support customers who require only small product batches. For example, we can supply lever-arm senders in custom lengths with batch sizes as small as 2,000 units per year.

Scalable integration

Our extensive range of sender solutions includes classic designs, such as tubular and lever-arm senders, and includes sensors based on thick-film network technology

(DSN) and contactless and low-wear sensors. Depending on the requirements of the tank or vehicle manufacturer, we can provide anything from simple, and robust senders to complex solutions including fuel supply connections (feed and return lines for fuel injection system, auxiliary heating system) and tank ventilation, all integrated in the flange. All systems are built for long service life, regardless of the selected operating principle and design, and withstands many years of proven use in series production applications.

Thick-film network technology (DSN)

Thick-film network technology (DSN) has become an established standard for modern fuel level sensors due to its reliability of measurement and the option of adapting the resistance characteristic curve for asymmetric tank geometries. The numbers stand for themselves – just in 2008, we shipped roughly 30 million units.

We offer several different models of lever-arm senders using DSN technology, all of which are designed to specific standards along the required environments. The standard model provides a double AgNi20 wiper contact and is specified for one million cycles.

A three-finger system is also available with two sets of three contacts, with units designed for either one million cycles (material: Hera 649) or two million cycles (AuNi5), depending on material composition.

One sender, different tanks

Our range also includes an economical solution to cover a wide range of tank shapes by one sensor. The new ALAS II (Adjustable Lever Arm Sensor, 2nd generation) can be adjusted to measure fuel tanks depths between 100 and 400 mm. Vehicle manufacturers and tank system specialists now have the option of using a single type of sensor to equip a whole range of tanks with different depths. This solution is particularly beneficial for the small volume productions that are characteristic of special vehicles.

Stainless Steel Level Sender

Contactless measurement in aggressive fuels

Conventional sensor technologies are well suited to meeting the required service life in gasoline and diesel applications, but this is not necessarily the case for new fuels, such as rapeseed methyl ester (RME, biodiesel). Aggressive components in RME have been found to accelerate wear of contact surfaces in conventional thick-film sensors, even where high-quality contact materials are used. The most reliable way to ensure continued, trouble-free level measurement under these changed conditions is contactless measurement.

Our MAPPS product is able to meet the demands of this type of environment. Thanks to the operating principle employed, these sensors are capable of over ten million cycles. With this patented technology, the actual sensing element is contained in a hermetically sealed housing and never comes into contact with the fuel. Measurements are obtained using a lever-arm sender, which moves a small magnet in an arc across the outside of the sensor housing. The magnetic force actuates 52 individual metal reeds, causing them to touch a contact strip inside the sensor, which in turn creates a variable electrical resistance as the measurement output.

The hermetically sealed MAPPS element is a mere 4 cm long

MAPPS explained: The magnet on the lever arm attracts flexible contact reeds to a contact strip, thereby creating a characteristic resistance signal.

3.1.2 Tubular Fuel Level Sender | Fuel and Water Level Sensors, Stainless Steel

Tubular sensors, made by stainless steel. They are completely water tight and enable stable and accurate monitoring any type of liquid levels, from water to fuel.

Technical data	
Avaliable lengths	from 150 to 1000 mm (other lengths on request)
Operating voltage:	6V - 24V
Operating temperature	-30°C a +70°C
Fixing flange:	5 holes Ø 54mm
Material:	Stainless steel AISI316

3.1.4 Fuel and Water Level Senders, Tubular Type | **Tubular Fuel Level Sender, Plastic****Technical data**

Rated voltage	6–24 V (insulated return)
Resistance	3 Ω (empty) to 180 Ω (full)
Current	20 mA to 120 mA
Operating temperature	-30 °C to +70 °C
Air inlet and outlet valves	Positive pressure up to 200 mbar corresponds to flow rate of less than 25 g/min diesel fuel. Positive pressure greater than 300 mbar corresponds to flow rate of more than 25 g/min diesel fuel. Negative pressure of 10–20 mbar corresponds to flow rate of more than 1.75
Service life	1 million full/empty cycles in super unleaded fuel
Vibration test	20 to 50 Hz PSD = 0.03 g ² /Hz 50 to 1,000 Hz PSD = -6 dB/oct 8 h / axial direction
Material	Flange, sender body, float: POM-C Float lever arm: X12CrNi 177k Tube: PA11 or PA12

**Connectors**

Adjustment

Adjust the length (**L**) of the sender unit and the distance (**D**) of the lever arm according to the height (**H**) of the fuel tank.

A new generation of lever-arm senders

Our new, specially developed lever-arm fuel senders now offer our customers an extremely flexible and robust way of ensuring reliable fuel measurement for various tank depths.

The system is based on a lever arm, which generates a signal corresponding to the current fuel level. The length of the lever arm can be adapted to specific requirements and shortened as needed. This makes it possible to equip various tank depths (145 mm to 400 mm) using just one system – something that is particularly advantageous with shallow tanks.

Two versions of the adjustable lever-arm fuel level sender are available, with and without a warning contact. The integrated warning contact version generates an additional control signal when the fuel level in the tank falls to a pre-defined level, which can be used to trigger an external reserve level indicator, for example. A specialized bearing with many years of proven marine use allows the lever arm to compensate for sloping of fuel in the tank. This reliable, rugged design delivers high accuracy read outs and is now available for a wide range of alternative applications, from small machines through agricultural vehicles to large stationary machines.

ALAS I

Adjustment screw

Specialist lever bearing with backlash compensation. Compensates for sloping of fuel (e.g., boats at sea).

Flexible adjustment for tank depths from 145 to 400 mm.

Part Number: N05-801-432

Mounting kit (available separately, not included as standard)

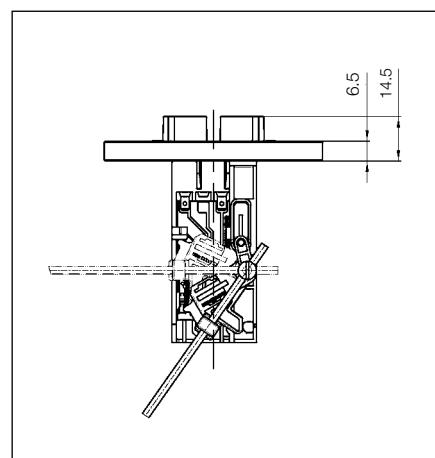

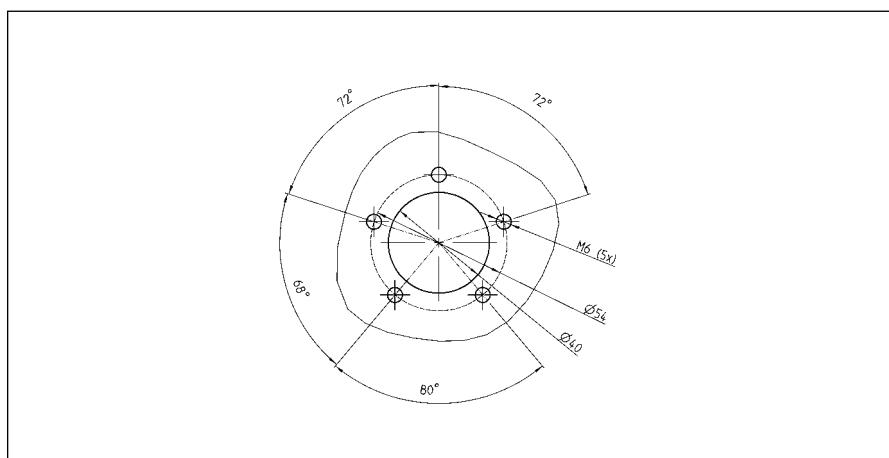

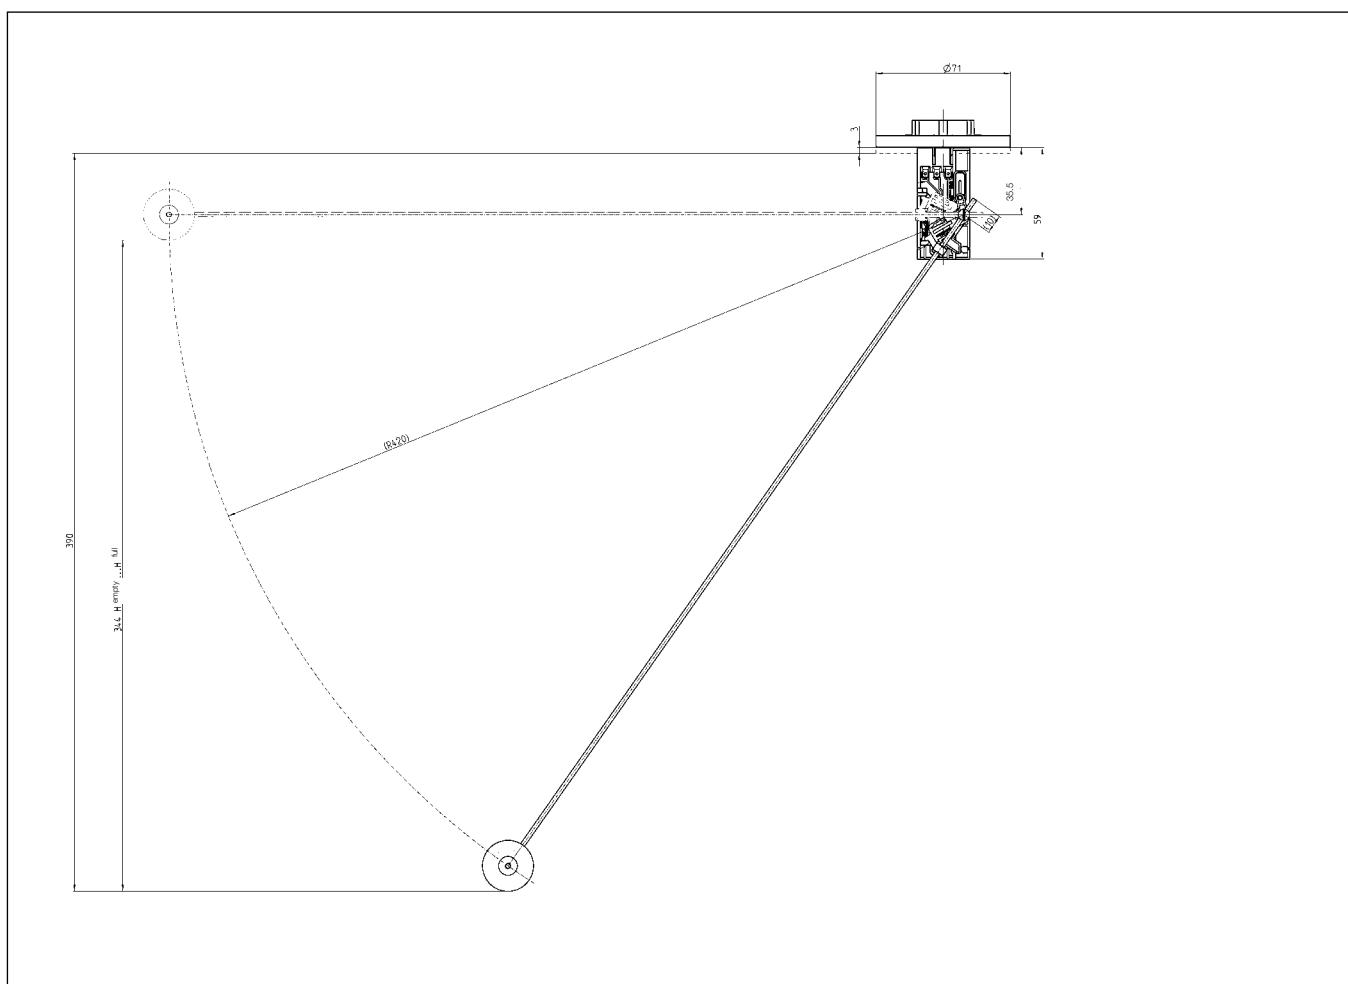

Benefits

- Adjustable lever-arm fuel-level sender
- Available with and without warning contact
- Ø 54 mm – standard flange
- 3 different resistance ranges (DSN thick-film technology) for use with standard gauges (alternative resistance ranges can be defined according to specific customer requirements)
- Straightforward adaptation to different tank depths thanks to easily adjusted lever arm
- Rugged design
- Long service life, redundant contact system
- All metal construction in stainless steel
- Nitrile rubber float – will not sink if damaged
- Electrical connections protected by connector housings
- Elongated holes for flexible installation
- Lever bearing with backlash compensation guarantees extended service life, continuously compensating for wave action affecting boats, for example
- Longlife resistive element (1 million “full/empty” cycles with super unleaded fuel)

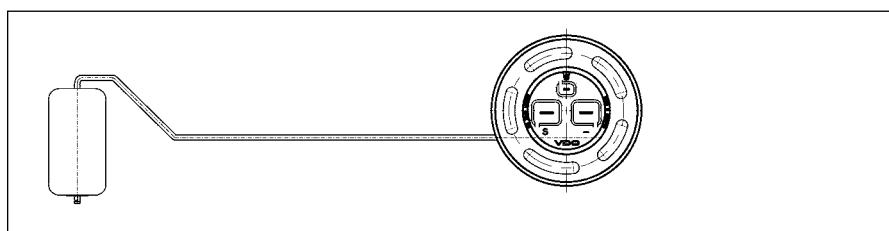

Wide range of applications

- Small engines and construction machines (mini-excavators, dumpers, compressors, etc.)
- Processing and agricultural machinery
- Marine applications (sports and leisure boats, jet skis, etc.)
- Two-wheeled vehicles (motorcycles, scooters, etc.)
- Micro cars, quad bikes
- Stationary machines (mini-excavators, dumpers, compressors, etc.)

Technical data	
Tank depth	For tank depths from 145 to 400 mm
Rated voltage	6–24 V, insulated return
Resistance ranges	<ul style="list-style-type: none"> • 3 Ω (empty) to 180 Ω (full) • 240 Ω (empty) to 33.5 Ω (full) • 2 Ω (empty) to 90 Ω (full) • Optional warning contact at 15% remaining volume • Measurement resolution of 39 discrete levels • Alternative resistance ranges can be defined according to specific customer requirements
Mounting geometry	5-hole flange with 54 mm diameter
Electrical connection	6.3 mm x 0.8 mm (2 x) 2.8 mm x 0.8 mm (1 x)* * Only on versions with warning contact

3.2.3 Fuel Level Senders, Lever-Arm Type | Adjustable Lever-Arm Fuel Level Sender, ALAS II

Item description	A2C5 number (packaging)	Contents
		
Adjustable lever-arm sender with inlet and outlet option, 180-2.5 ohms (generic, 10 units/pack)	A2C59510946	Sensor assy
Adjustable lever-arm sender with inlet and outlet option, 33.5-240 ohms (generic, 10 units/pack)	A2C59510973	Sensor assy
Adjustable lever-arm sender with inlet and outlet option, 90-2 ohms (generic, 10 units/pack)	A2C59510975	Sensor assy
Lever (generic, 10 per/pack), individually boxed with outer box	A2C59511479	Lever assy
		
Inlet, 12 mm (10 per/pack), individually boxed with outer box	A2C59510949	Connector assy
Inlet, 10 mm (10 per/pack), individually boxed with outer box	A2C59510951	Connector assy
Inlet, 8 mm (10 per/pack), individually boxed with outer box	A2C59510953	Connector assy
Inlet, 6.5 mm (10 per/pack), individually boxed with outer box	A2C59510955	Connector assy
		
Outlet, 12 mm (10 per/pack), individually boxed with outer box	A2C59510950	Connector assy
Outlet, 10 mm (10 per/pack), individually boxed with outer box	A2C59510952	Connector assy
Outlet, 8 mm (10 per/pack), individually boxed with outer box	A2C59510954	Connector assy
Outlet, 6.5 mm (10 per/pack), individually boxed with outer box	A2C59510956	Connector assy
Blanking plug (10 per/pack), multipack	A2C59510965	Blanking plug assy

Dimensions [mm]

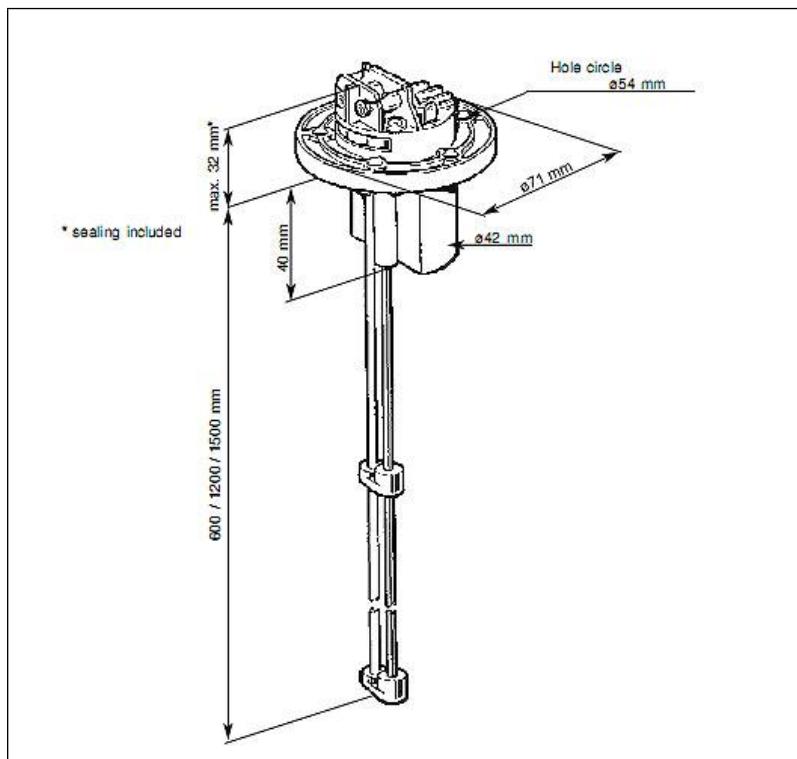

Water Level Sensors

3.3.1 Capacitive and Lever Type Fresh Water Level Sensors

3.3.2 Black water Level Sensors

3.3.1 Fresh Water Level Sensor

Dimensions of sensor (mm):

Part number	Tank height
N02-240-402	80 to 600mm
N02-240-404	600 to 1200mm
N02-240-406	1200 1500mm
N05-001-370	Flange

Technical data	
Capacitive sensor:	output 4-20mA
For tank height:	80 to 1500 mm
Operating voltage:	da 6V a 24V
Operating temperature:	-30°C a +70°C
Fitting flange:	5 holes Ø 54mm

Lever type fresh water level sensors

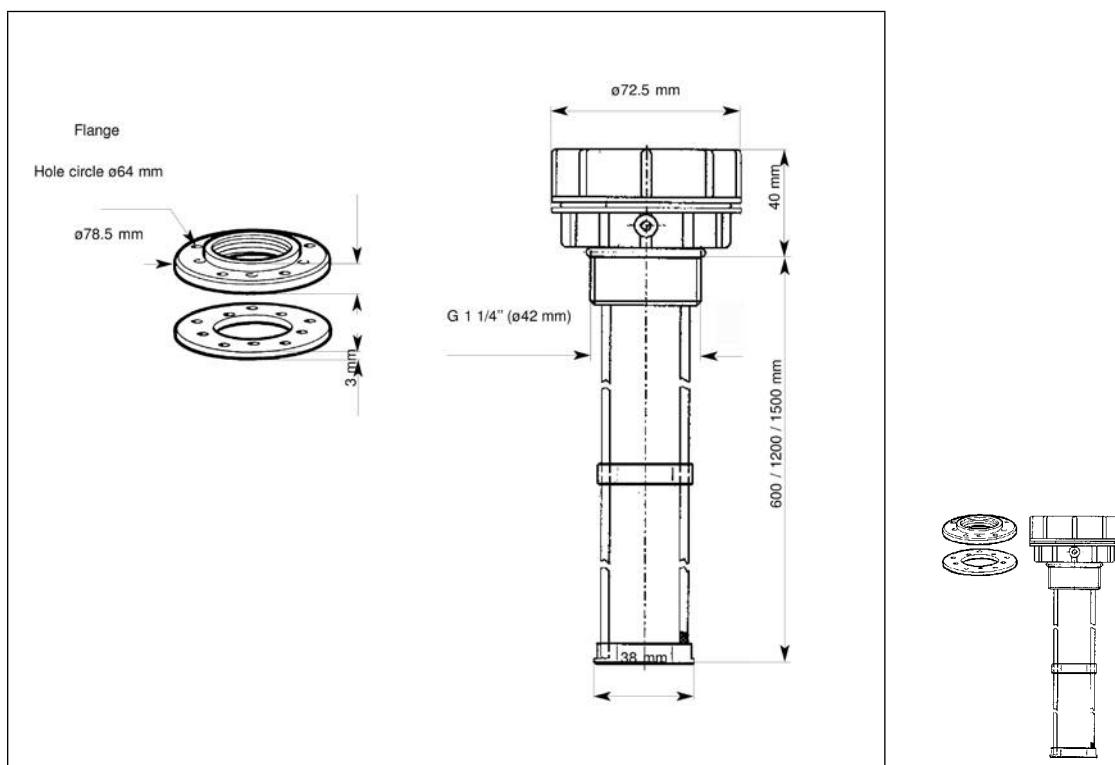

Insulated return,stainless steel	
Operating voltage	da 6V a 24V
Tank height	200-600mm
Ohm value	0-180Ω

Part number	Tank height
226-828-001-001K	200 to 600mm

3.3.2 Water Level Sensors | Black Water Level Sensors

Capacitive sensor (galvanic separated) with adjustable warning contact.

Dimensions of sensor (mm):

Part number	Tank height
N02-240-902	80 to 600mm
N02-240-904	600 to 1200mm
N02-240-906	1200 to 1500mm
X10-224-000-007	Flange

Technical data	
Capacitive sensor:	output 4-20mA
For tank height:	80 to 1500 mm
Operating voltage:	6V-24V
Operating temperature:	-30°C to +70°C

Wiring harness	X	X	X
Operating instructions	X	X	X

Components, Type 1 and Type 2

Part Number	Description	Type
X39-737-100-001	3-channel analog (tempostat®)	Type 1 Standard
X39-737-101-001	3-channel analog (tempostat® + speed and rev limiter)	Type 1 Enhanced
X39-737-102-001	3-channel analog (tempostat® + speed and rev limiter + engine speed controller)	Type 1 Premium
X39-737-200-001	2-channel analog + 2 switches (tempostat®)	Type 2 Standard
X39-737-201-001	2-channel analog + 2 switches (tempostat® + speed and rev limiter)	Type 2 Enhanced
X39-737-202-001	2-channel analog + 2 switches (tempostat® + speed and rev limiter + engine speed controller)	Type 2 Premium

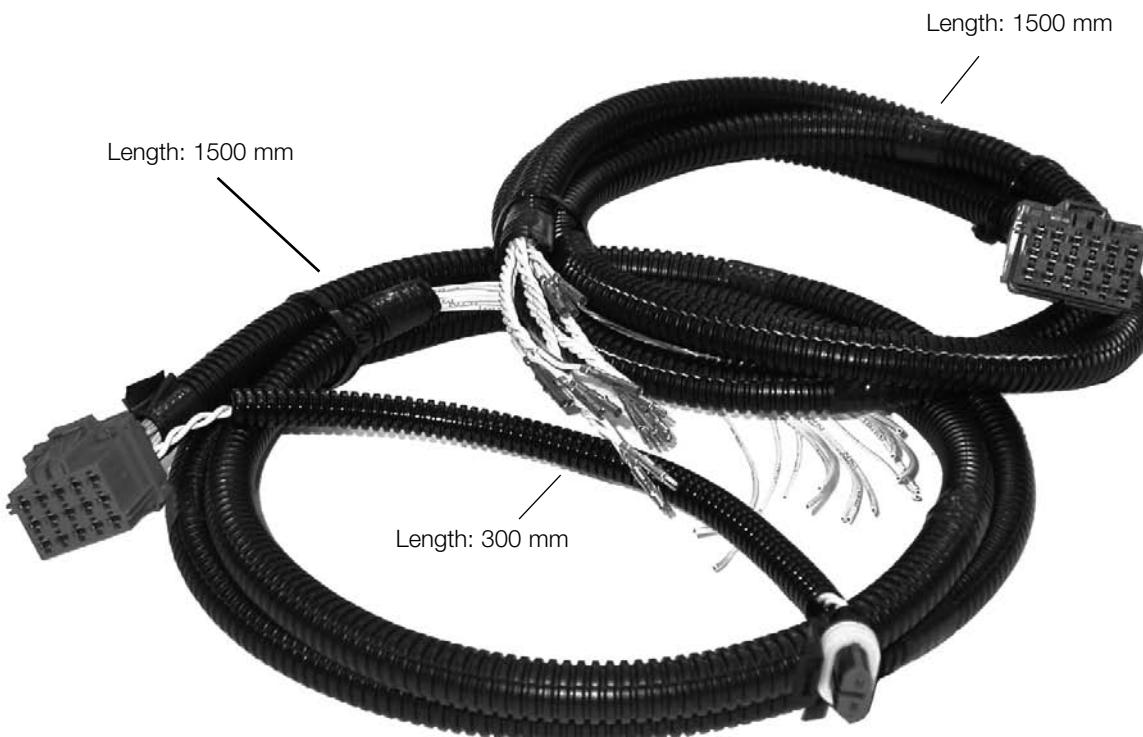

Technical data		Test specifications
Rated voltage	12 V / 24 V	Low and high temperature
Operating voltage	8–32 V	• ISO 16750 Part 4, Section 5.1.1.2 and 5.1.2.2 • BS EN 60068-2: 1993 Test Ab • BS EN 60068-2: 1993 Test Bb
Current consumption	Tmnl. 15 <1 mA; Tmnl. 30 <80 mA (<10 mA standby)	Random vibration test in temperature cycle
Operating temperature	-40 °C to +85 °C (IEC 68-2-38)	• ISO 16750-3: 2003 Electrical and electronic equipment – Mechanical loads • IEC 68-2-64: 1993, Vibration, broadband random: Method 2 • BS EN 60068-2-14: 2000 Test Nb, Environmental testing
		Thermal shock
		• ISO 16750 Part 4, Section 5.3.3 • BS EN 60068-2-14: 2000 Test Na
		Temperature and humidity
		• ISO 16750 Part 4, Section 5.6.2 • BS EN 60068-2-38: 1999
		Temperature cycling
		• ISO 16750 Part 4, Section 5.3.2 • BS EN 60068-2-14: 2000 Test Nb
		Approval acc. to EU directives
		Speed limitation devices 92/24 (Enhanced and Premium versions only) EMC 2006/96 EG
		Official appointed expert
		Tempostat functionality tested by a prescribed testing authority for the approval of motor vehicles and their systems, Germany

Installation kit (replacement part)

Part Number: X39-737-300-003

The installation kit comprises:

Part Number	Item	Description	Qty.	Min. units/order
X11-737-002-002	1	Female connector housing	2	10
X11-737-002-001	2	Male connector housing	2	10
X11-737-002-004	3	Wire seal	4	20
X11-737-002-003	4	Interface seal	2	10
X11-737-002-005	5	Coding pin	10	50
X11-737-002-006	6	Contact pin	9	100
X11-737-002-007	7	Socket contact	9	100
Not available individually, must be ordered as a set	8	Cross head screw, 4.8 x 13	2	
X11-737-002-009	9	Fuse housing	2	10
X11-737-002-012	10	Fuse housing cover	2	10
X11-737-002-010	11	Fuse, 1 A	2	10
X11-737-002-011	12	Socket contact for fuse housing	4	20
Not available individually, must be ordered as a set	13	Cable ties	10	

Wiring harness (replacement part)**Part Number:** X39-737-300-008**Technical data**

Max. load	5 A
Cable	B 0,5 as per DIN 72551
Operating temperature	-40 °C to +105 °C
Protection rating (pedal coupling point)	IP65 DIN 40050

Manual control interface for engine speed controller (accessory)

Only for use under protected conditions

Part Number: X39-737-003-003

Technical data

Two-wire interface, serial

Operating temperature -40 °C to +85 °C

Pedal Interface Dongle (test equipment)

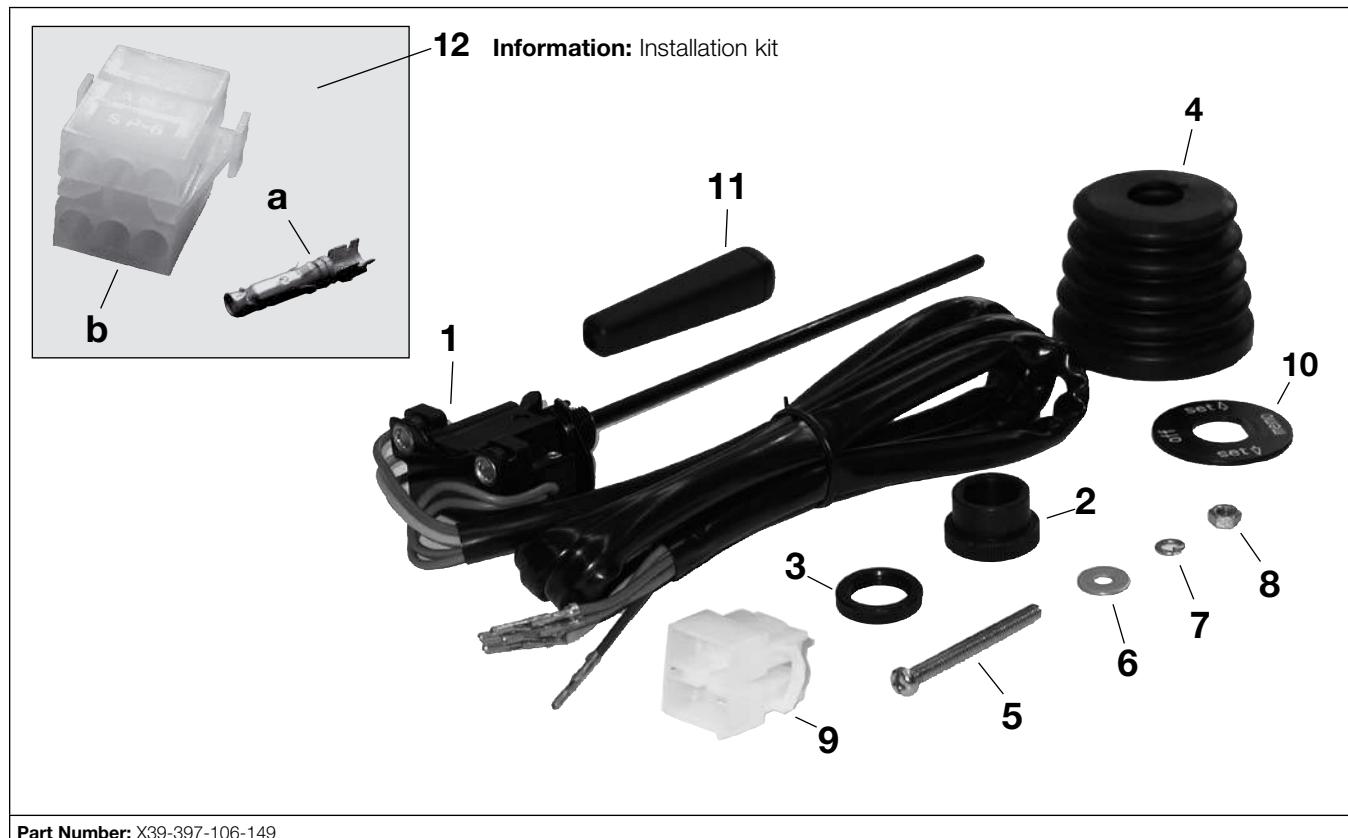

Only for use under protected conditions

**Dongle for workshops**

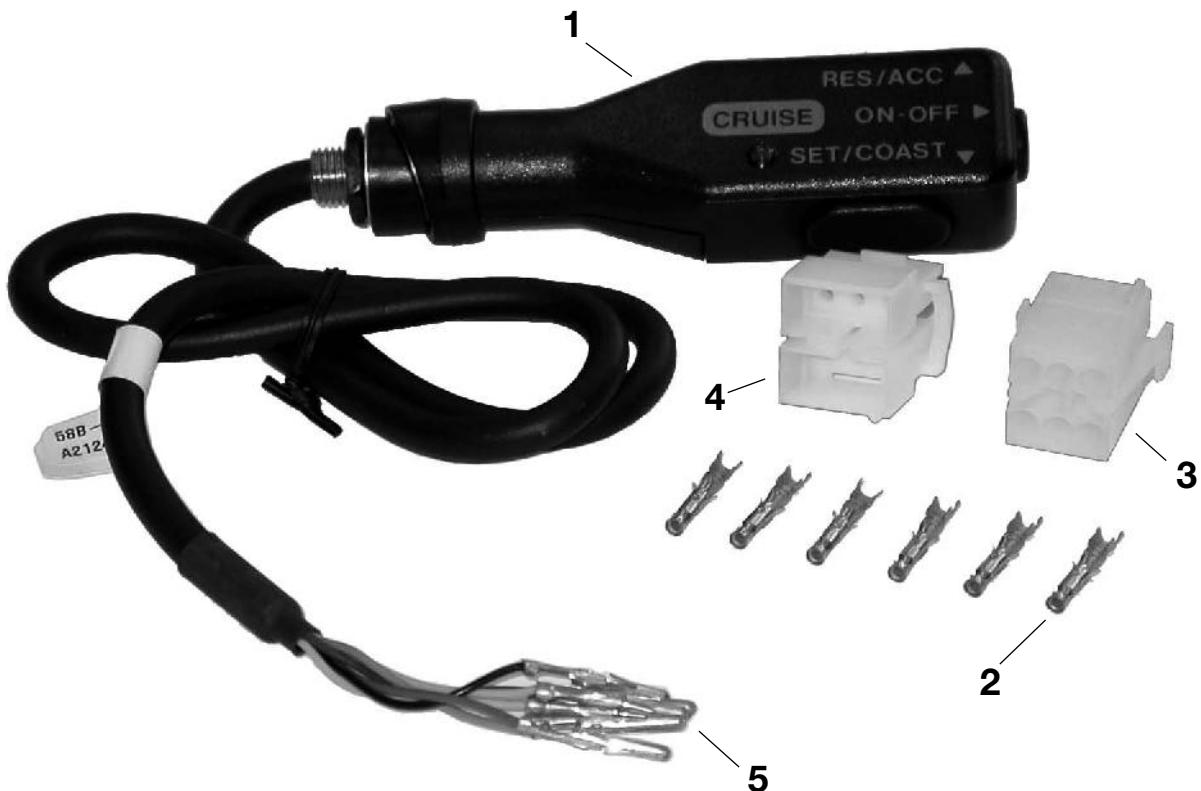

Part Number	Name	Description
X12-737-100-002	Pedal Interface Dongle Level 2	Workshop dongle: Allows access to all functions, including maximum speed limiter.
X12-737-100-003	Pedal Interface Dongle Level 3	This dongle allows access to tempostat® functions and engine speed controller (fixed engine speed control, variable engine speed control, gas pedal position limiter)

Technical data

Connects to	PC: USB
Operating temperature	0 °C to +50 °C

Standard operating lever (accessory)**System component for tempostat® 12 V, AGB Komfort, E-Gas®, II E-Gas® compact, Pedal Interface II****Part Number:** X39-397-106-149**The installation kit comprises:**

Part Number	Item	Description	Qty.
Not available individually, must be ordered as a set	1	Operating lever	1
Not available individually, must be ordered as a set	2	Threaded sleeve (M14 x 1)	1
Not available individually, must be ordered as a set	3	Knurled nut (M14x1)	1
Not available individually, must be ordered as a set	4	Bellows	1
Not available individually, must be ordered as a set	5	Cylinder head bolt (M4 x 40 DIN 84)	2
Not available individually, must be ordered as a set	6	Washer (4.2 DIN 9021)	2
Not available individually, must be ordered as a set	7	Spring washer (4 DIN 127)	2
Not available individually, must be ordered as a set	8	Hexagonal nut (M4 DIN 934)	2
Not available individually, must be ordered as a set	9	Connector pin housing, 6-pin	1
Not available individually, must be ordered as a set	10	Cover	1
Not available individually, must be ordered as a set	11	Grip	1
X39-737-300-010	12	Information Installation kit for standard operating lever (not supplied as standard, order separately if required)	
X11-708-002-023	a	Socket contact	6
X11-708-002-027	b	Female connector housing	1

LED operating lever, right – 12 V applications only (accessory)

Part Number: X39-737-300-004

The installation kit comprises:

Part Number	Item	Description	Qty.
Not available individually, must be ordered as a set	1	LED operating lever	1
X11-708-002-023	2	Socket contact	6
X11-708-002-027	3	Female connector housing	1
X39-397-106-069	4	Male connector housing	1
X11-708-002-022	5	Contact pin	6

LED operating lever, left – 12 V applications only (accessory)

Part Number: X39-737-300-005

The installation kit comprises:

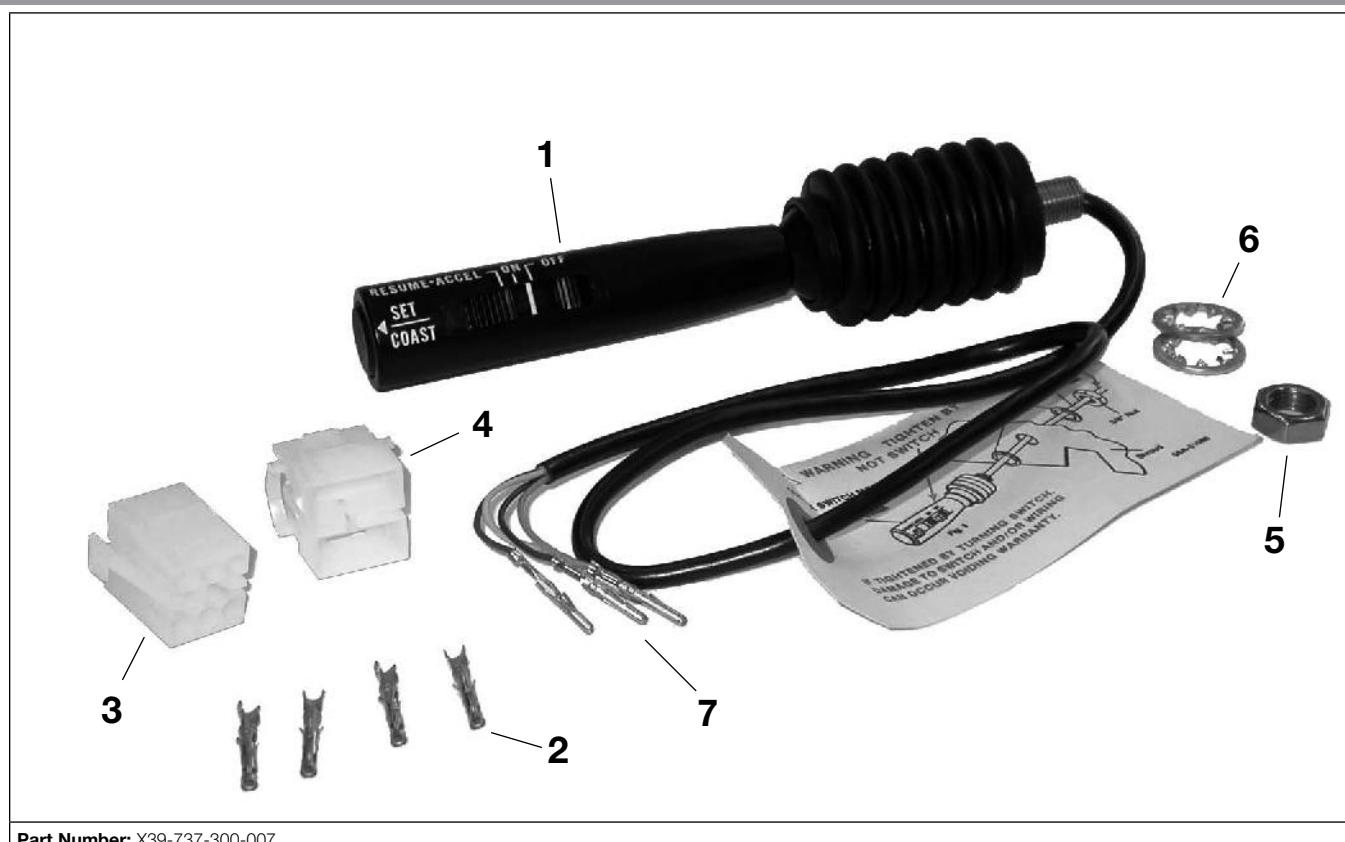

Part Number	Item	Description	Qty.
Not available individually, must be ordered as a set	1	LED operating lever	1
X11-708-002-023	2	Socket contact	6
X11-708-002-027	3	Female connector housing	1
X39-397-106-069	4	Male connector housing	1
X11-708-002-022	5	Contact pin	6

Operating lever, right, flexible (accessory)

Part Number: X39-737-300-006

The installation kit comprises:

Part Number	Item	Description	Qty.
Not available individually, must be ordered as a set	1	Flexible operating lever	1
X11-708-002-023	2	Socket contact	4
X11-708-002-027	3	Female connector housing	1
X39-397-106-069	4	Male connector housing	1
Not available individually, must be ordered as a set	5	Flat hexagonal nut, M10	1
Not available individually, must be ordered as a set	6	Serrated lock washer, 10.5	2
X11-708-002-022	7	Contact pin	4

Operating lever, left, flexible (accessory)

Part Number: X39-737-300-007

The installation kit comprises:

Part Number	Item	Description	Qty.
Not available individually, must be ordered as a set	1	Flexible operating lever	1
X11-708-002-023	2	Socket contact	4
X11-708-002-027	3	Female connector housing	1
X39-397-106-069	4	Male connector housing	1
Not available individually, must be ordered as a set	5	Flat hexagonal nut, M10	1
Not available individually, must be ordered as a set	6	Serrated lock washer, 10.5	2
X11-708-002-022	7	Contact pin	4

Wiring harness AMP Plug CTS Pedal

Part number: A2C59510983

Wiring harness AMP Slide Plug Opel Combo

Part number: X39-737-300-014

Type-specific system: Mitsubishi Colt 2004/2005

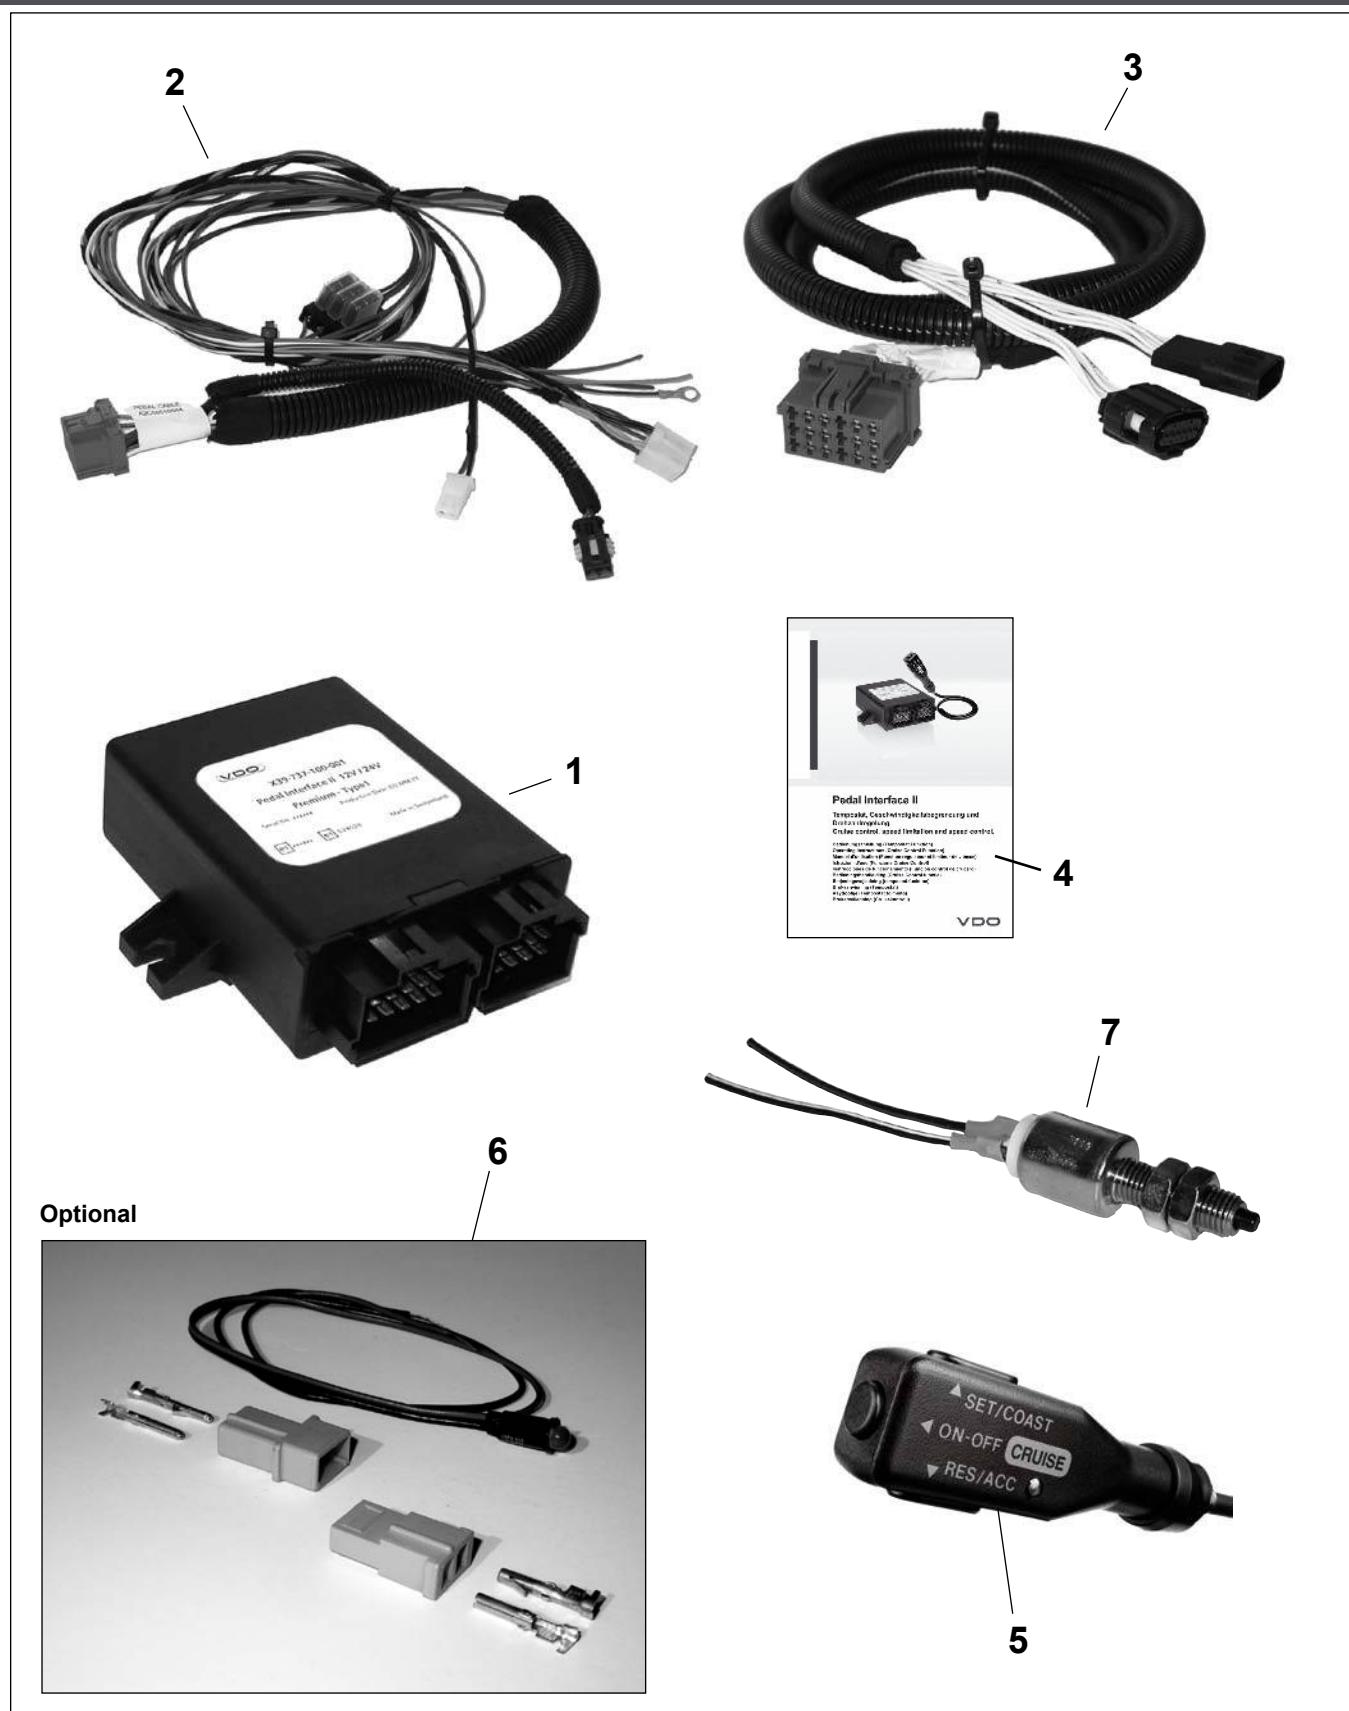

Part Number	Item	Description
Mitsubishi Colt, 2004/05 Model, DI-D & CZT, 5 Gear Manual Transmission		
X10-737-100-002		1.5 MPI Turbo: 1.5 L gasoline 110 kW (CZT) MT 1.5 DI-D Turbo: 1.5 L diesel 50 kW or 70 kW MT
Replacement parts		
X39-737-100-001	1	Electronic controller: The controller must be programmed by an authorized party when used as a replacement part. File name: Colt MTDID&CZT.P2U

Description

This electronic controller has been designed for use in off-highway vehicles. The system operates the fuel control lever of an internal combustion engine by means of an actuator, which moves according to a set of pre-defined set points. All input and output signals are processed by an integrated 16-bit processor. Thanks to the flexibility of its design, the controller can be programmed to meet a wide range of requirements, such as:

- Pedal-by-wire
- Engine speed control and limitation
- Vehicle speed control and limitation
- Position limitation

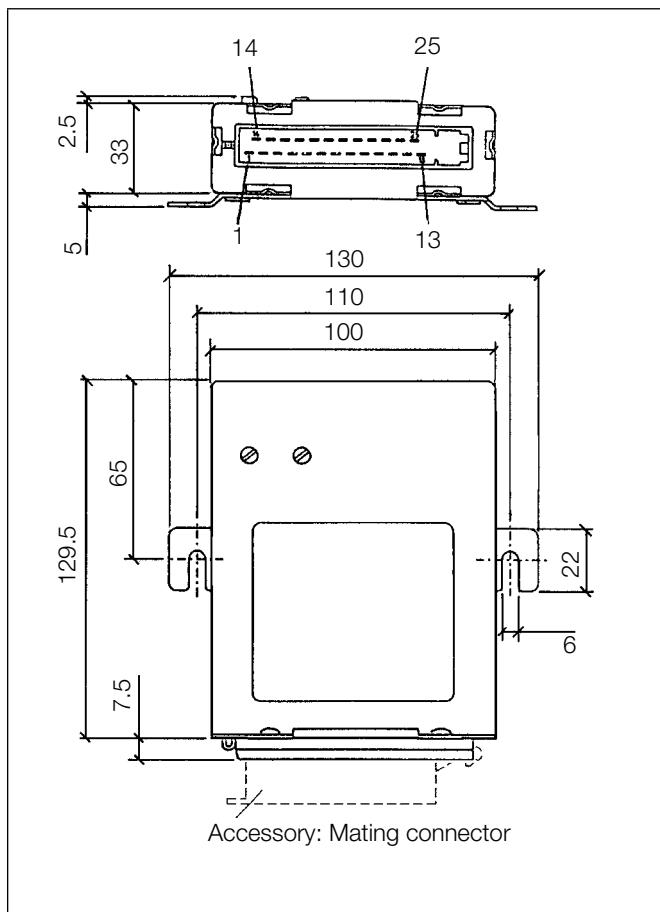

A custom PC-based software tool allows the controller to be accessed as necessary via the diagnostics interface in order to change the calibration or read out diagnostic trouble codes.

The controller complies with the following standards:

- 2006/96/EC Automotive EMC Directive
- Directive 92/24/EEC relating to speed limitation devices
- DIN 40839 Interferences conducted along supply lines

Technical data

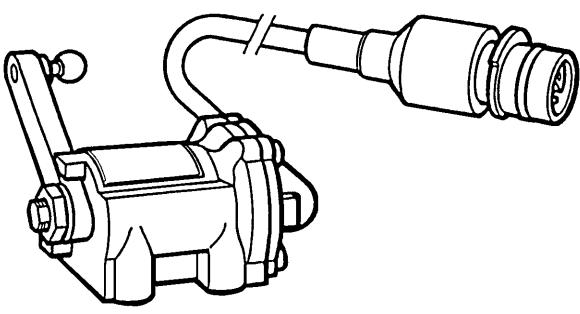

Rated voltage	12 V / 24 V
Operating voltage	9.5–32 V
Operating temperature	-40 °C to +70 °C
Protection rating	IP53 DIN 40050
Installation location	Passenger compartment
Orientation	Electrical connection facing down (minimum 5°)
Connector	25-pole AMP

Set point sender**System component for E-Gas® II, E-Gas® Compact**

	Description <p>Set point senders use a potentiometer to convert a pedal position into an electrical signal. The potentiometer wiper is positively connected to the driving lever via the potentiometer and drive shaft. The potentiometer housing is positively connected with the aluminum housing. The set point signal is always available. A safety contact (SK) and kick-down contact (KD) are actuated within a predefined range. The safety contact corresponds to a specific potentiometer value. The actuating cam is positively connected with the drive shaft. When the driving lever moves from full-load to no-load, the safety contact is positively opened. Fatigue-resistant contact springs are used.</p>
Part Number: 445-804-005-014P	

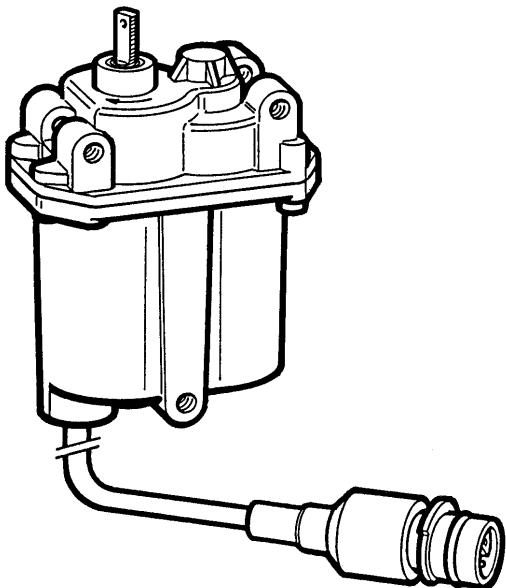

Technical data	
Power supply via electronic controller	
Operating temperature	-40 °C to +80 °C
Initial torque	160 Ncm ^{+20 Ncm} _{-30 Ncm}
Final torque	280 Ncm ± 40 Ncm
Kick-down torque	550 Ncm ± 70 Ncm
Hysteresis	50 Ncm ± 20 Ncm at no-load 50 Ncm ± 20 Ncm at full-load
Protection rating	IP66 DIN 40050
Max. tightening torque for fastening screws 8 Nm + 4 Nm (at 9 mm screw-in depth)	
Connector	ITT Canon Sure Seal, 7-pin

Electrical actuator**System component for E-Gas® II, E-Gas® Compact****Description**

This electrical actuator was designed by VDO for the purpose of operating a diesel engine fuel-injection pump lever in conjunction with a VDO electronic controller.

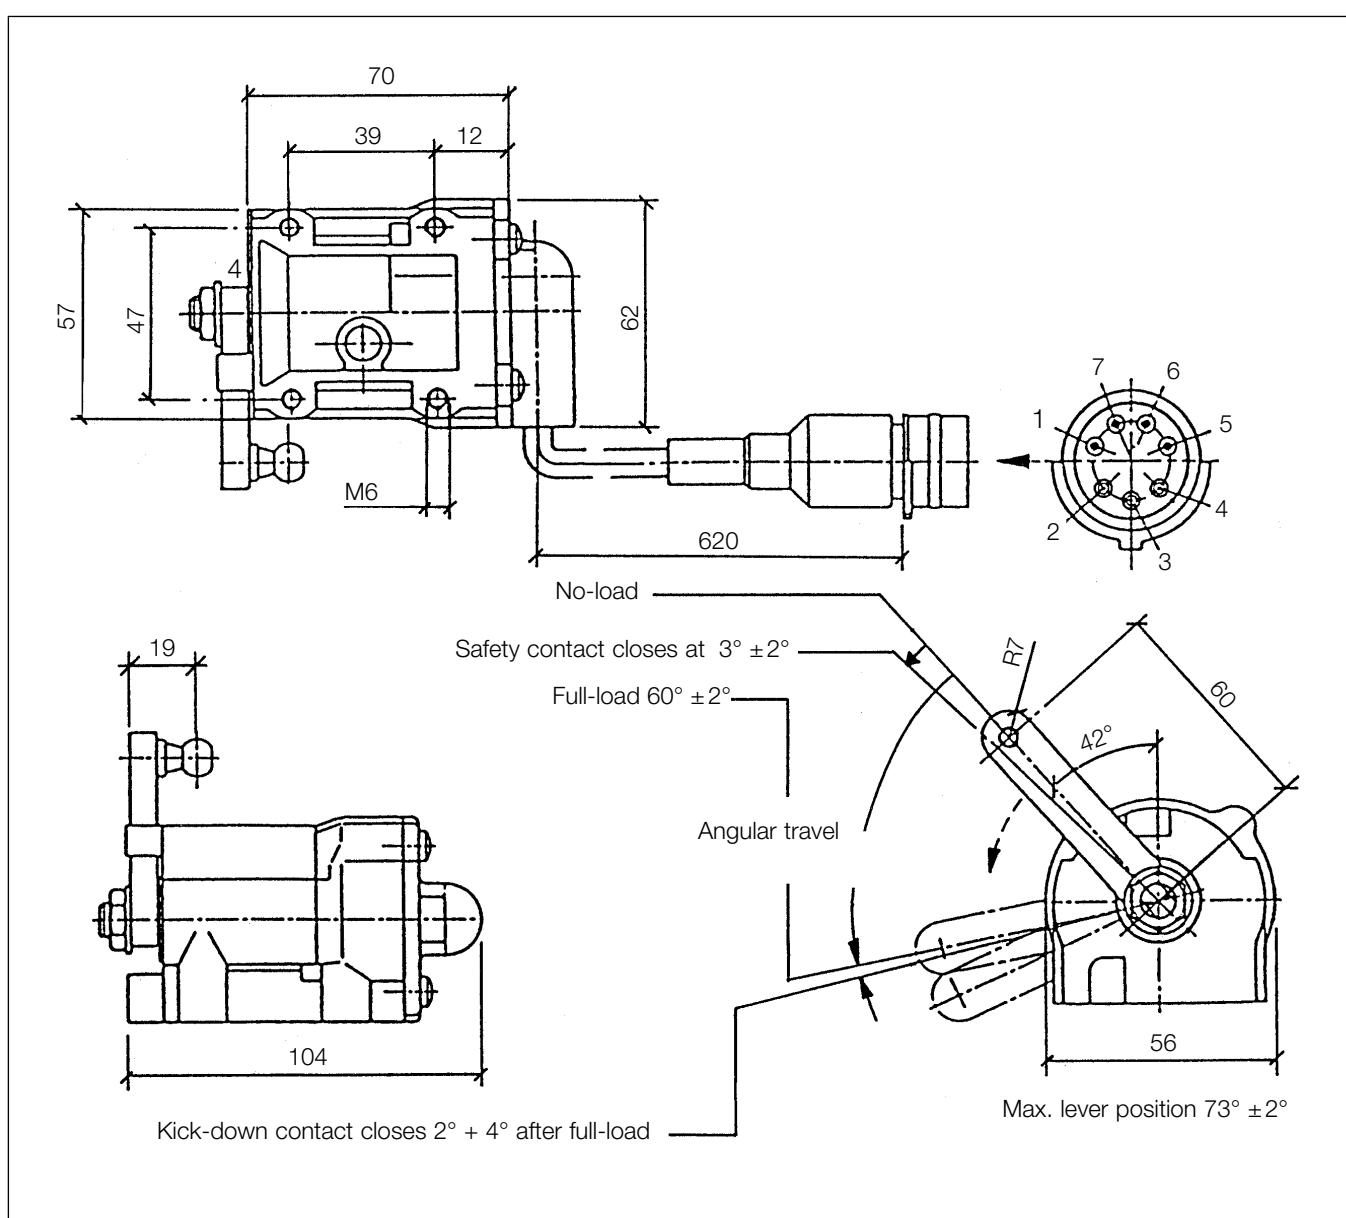

Construction

Watertight cast aluminum housing with PTFE membrane for pressure equalization. Three-stage transmission permanently engaged with output shaft. A conductive plastic potentiometer provides feedback. Features a safety contact that opens when output shaft is at a pre-defined position. Connecting cable with connector.

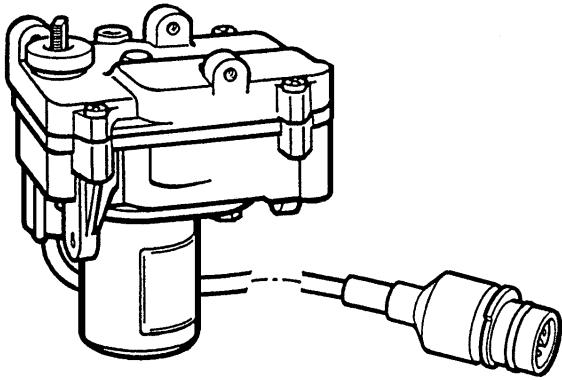

Part Number: 408-411-005-013P (24 V) - 408-211-004-002P (12 V)

Technical data

Rated voltage	24 V or 12 V
Rated torque	180 Ncm (used in conjunction with elec. controller)
Actuation time	< 250 ms at rated voltage 100 to 180 Ncm actuating torque
Safety contact switching point	21° to 12.5° (closed at no-load)
Operating temperature	-40 °C to +120 °C (+140 °C max. 1 x 1h)
Protection rating	IP56 DIN 40050
Mechanical angle	120°
Max. tightening torque for drive shaft	10 Nm
Max. tightening torque for fastening screws	8 Nm + 4 Nm (at 9 mm screw-in depth)
Connector	ITT Canon Sure Seal, 7-pin

Dimensions [mm]

Terminal assignment	
1	• White, safety contact (SK), male

Description

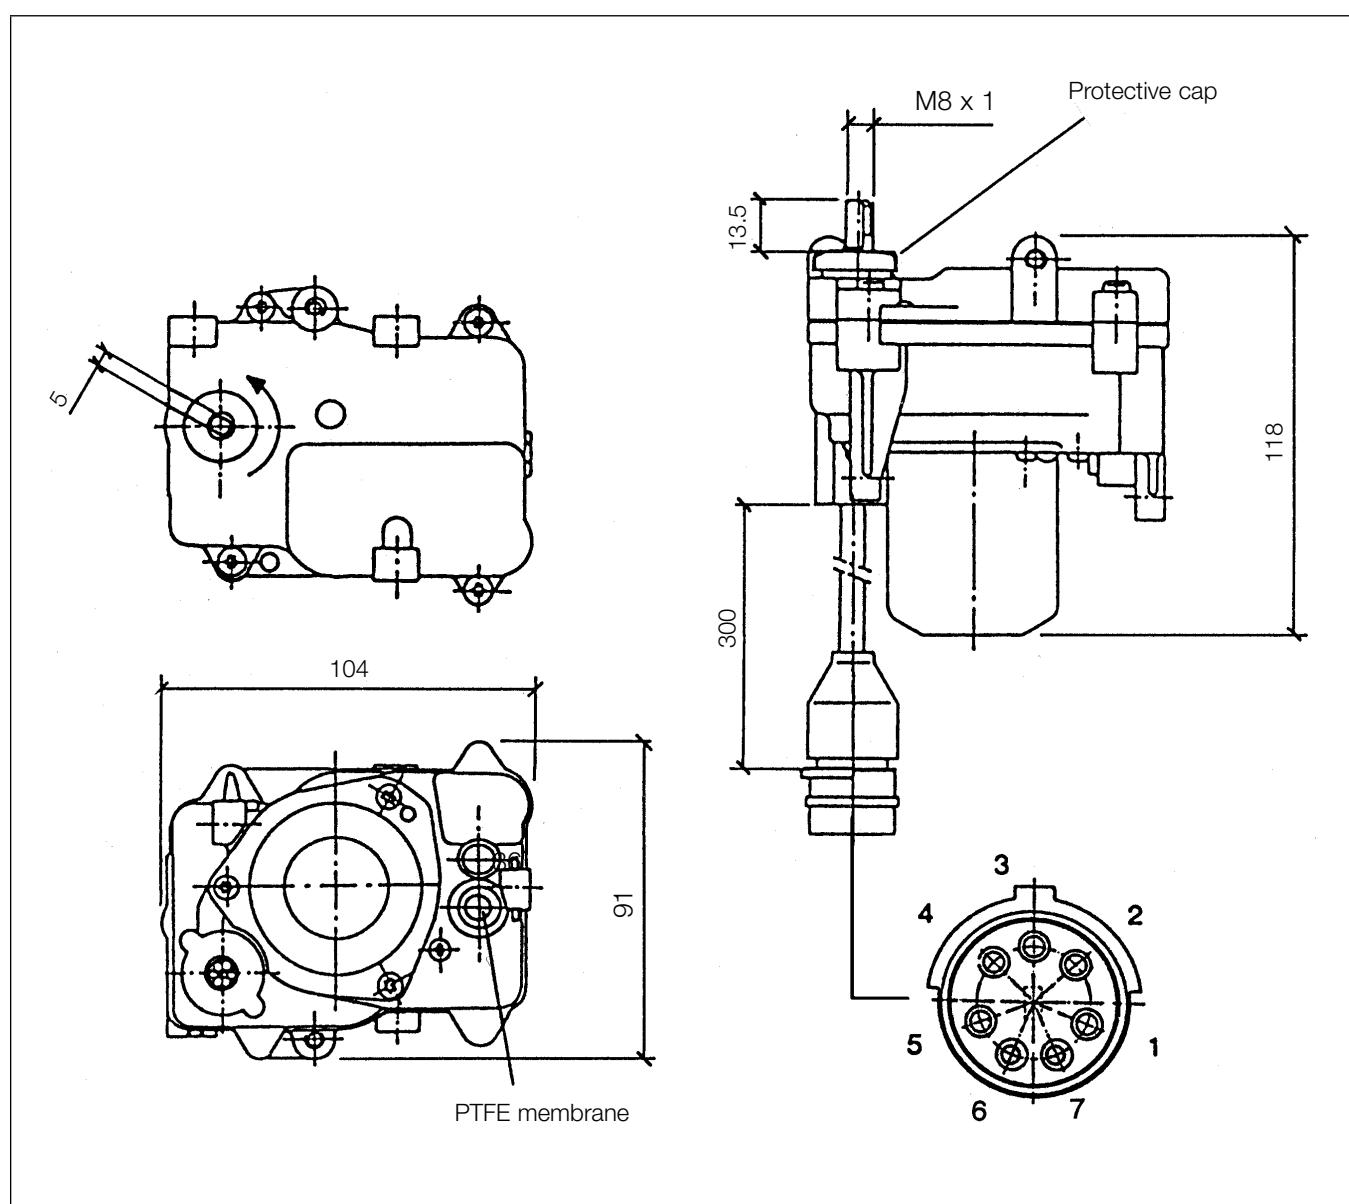

This electrical actuator was designed by VDO for the purpose of operating a diesel engine fuel-injection pump lever in conjunction with a VDO electronic controller. A pulse-width modulated (PWM) signal is used to control the permanent magnet DC motor.

Construction

Watertight cast aluminum housing with PTFE membrane for pressure equalization. Three-stage transmission transfers force from the DC motor to the output shaft via an electromagnetic clutch. A conductive plastic potentiometer provides feedback. Connecting cable with connector.

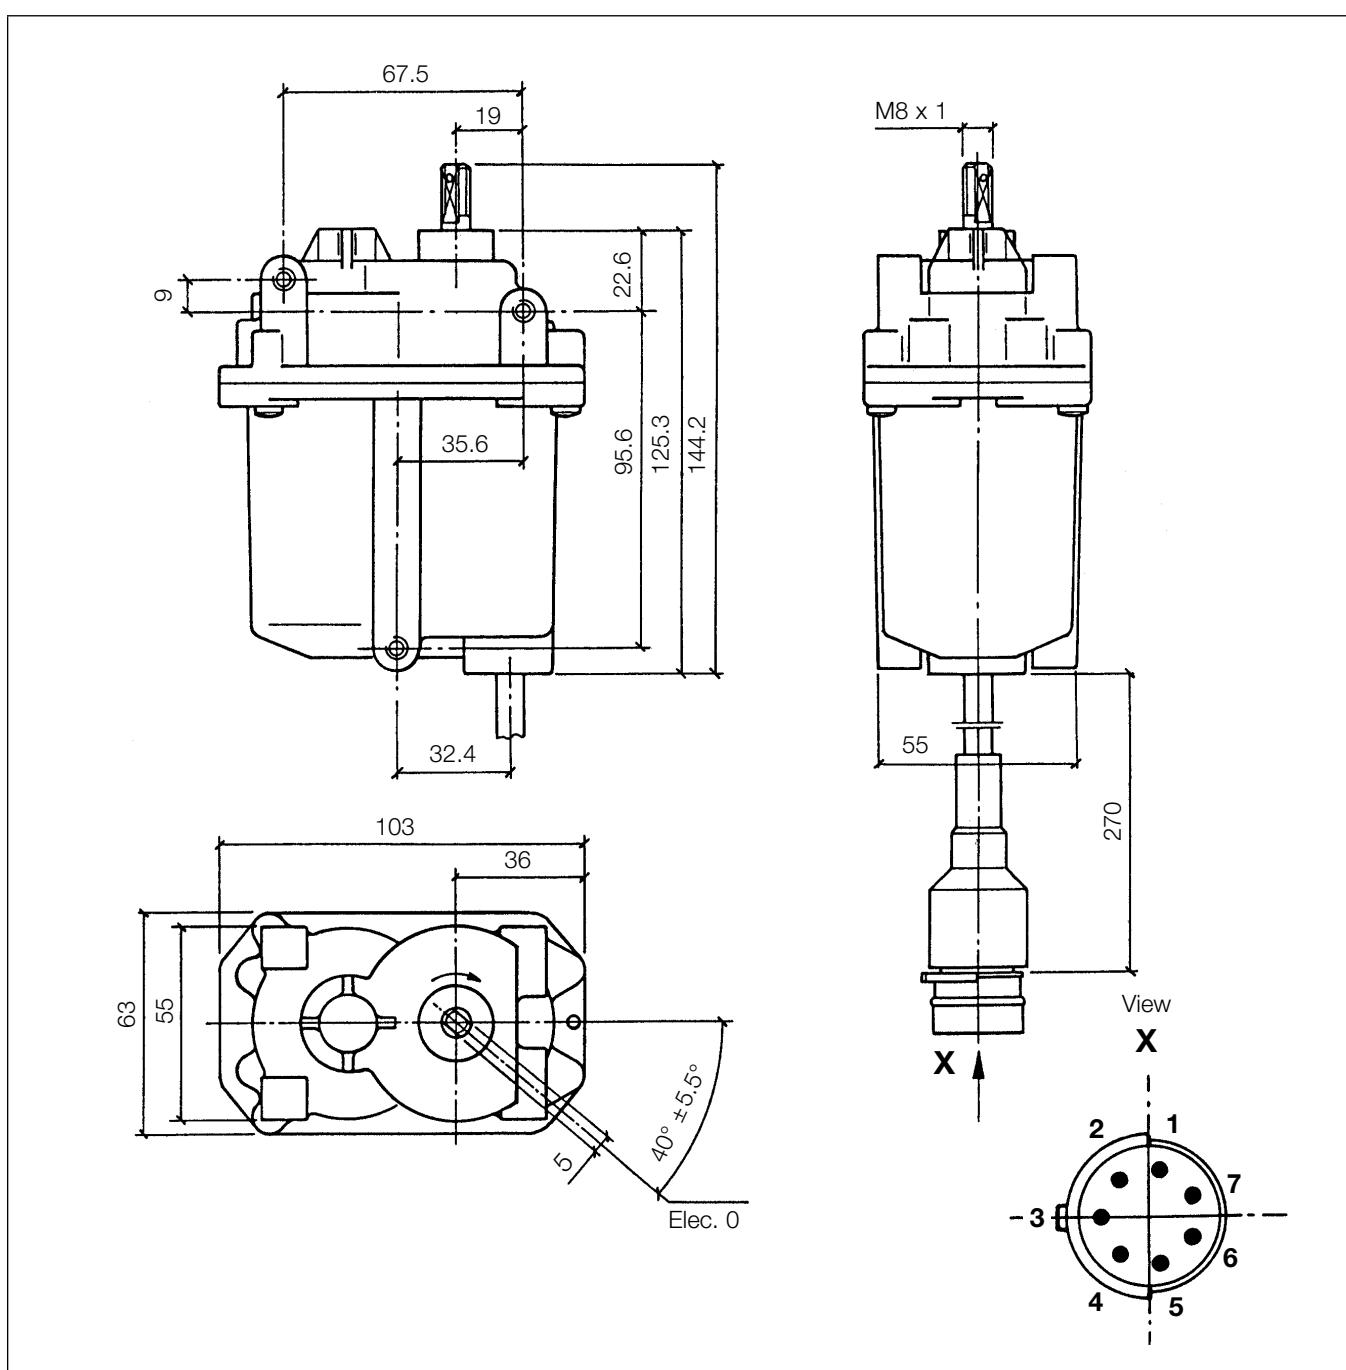

Technical data

Rated voltage	24 V
Rated torque	250 Ncm
Closed-to-open stroke time	≤ 1 s
Closed-to-open stroke time (typical)	750 ms
Insulation resistance	≥ 500 kΩ
Dielectric strength	500 V
Operating temperature	-25 °C to +90 °C
Protection rating	IP56 DIN 40050 Part 9
Max. tightening torque for drive shaft	10 Nm
Max. tightening torque for fastening screws	12 Nm (at 9 mm screw-in depth)
Mechanical angle	103° ± 5°
Connector	ITT Canon Sure Seal, 7-pin

5.2 Hand-Operated Accelerators and Pedal Sensors

Accelerator Pedals

5.1 Pedals

5.2 Hand-Operated Accelerators
and Pedal Sensors

5.1.a Pedals | Floor-Mounted Pedal

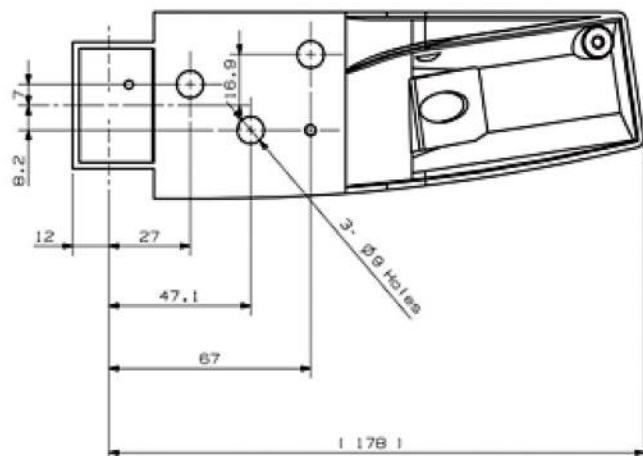

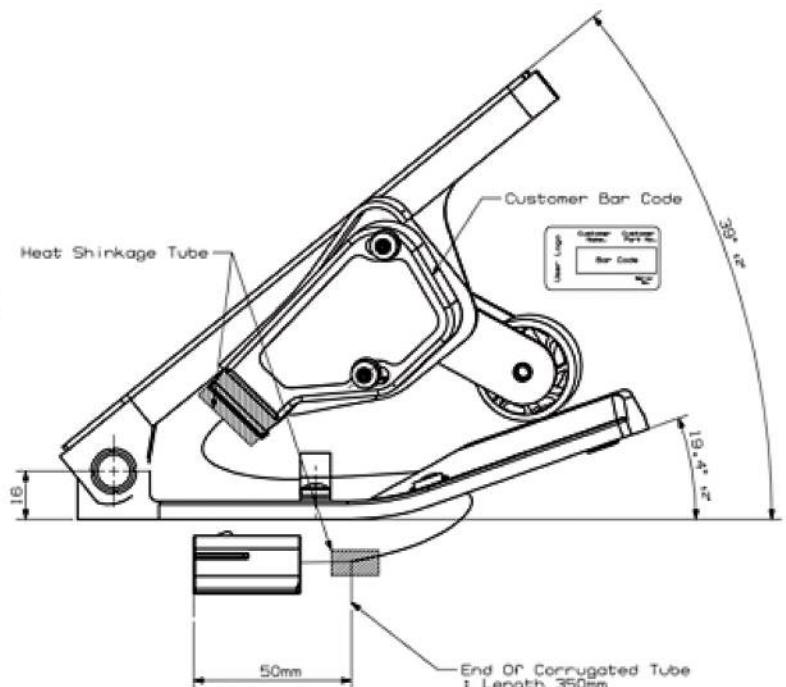

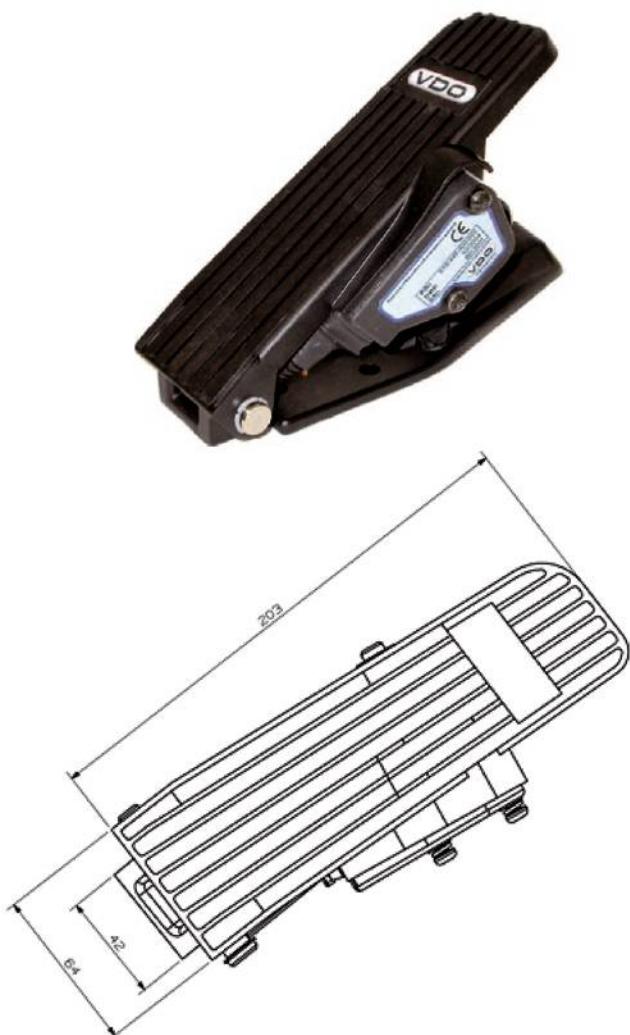

The floor-mounted pedal is composed of a base-plate for mounting in the passenger compartment and a pre-fitted pedal plate (aluminum ADC12, injection molded, black finish, 66 % nylon, 30 % GFRP). Two return springs are used to replicate the pedal forces and direction-dependent hysteresis; twin return springs are used for added safety. Pedal position feedback is provided by a contactless sensor connected to either an analog or a PWM (pulse width modulated) signal circuit, depending on the variant. The no-load state can be detected either by an optocoupler or mechanically via a microswitch, according to the application.

New generation - Floor Pedal integrated

Output signals from pedals in this range are generated by contactless sensors. Twin coil springs integrated into the pedal provide added reliability for the pedal return mechanism. A special hysteresis element ensures the best possible experience for the driver when the pedal is operated. Various Hall sensors operate in conjunction with the integrated electronics to generate either analog or pulse width modulated (PWM) signals. The range of sensors is designed to suit every common type of engine interface. Sensors can also be adapted in accordance with customer requirements for specialist applications. An optional kick-down signal can be generated using a special integrated mechanism. Kick-down is triggered when a specified upper threshold value is exceeded in the analog voltage range or an upper PWM signal threshold is exceeded (no additional signal inputs for engine controller required).

Standard type**Compact type****Description**

Floor-mounted gas pedal for applications in commercial vehicles with electronically controlled engines.

The following variants are available:

- Standard type with 250 mm long foot plate and various pedal angles, available for series production: Q3, 2009
- Compact type with 164 mm short foot plate and 25° pedal angle, available for series production: Q4, 2009

Features

- Innovative, low-noise, compact design
- Rugged construction, suitable for many different applications
- Compatible with various engine interfaces
- Contactless, non-wearing sensors
- Integral twin return springs as per U.S. FMVSS-124
- Extremely reliable
- 6-pin connector (Delphi Packard, Type Metri Pack 150) built directly into sensor housing
- Customer-specific footplates can be accommodated on request
- Low noise pedal operation at no-load and full-load stops
- Quiet kick-down
- Glass fiber-reinforcement of plastic parts subject to mechanical load (PA66GF33)
- Choice of pedal angles (25°, 30°, 35°, 40°, or 45° for compact type, 30°, 35°, 40°, 45° or 50° for standard type)
- Angle of travel, 20°

Supported engine interfaces (both pedal types)

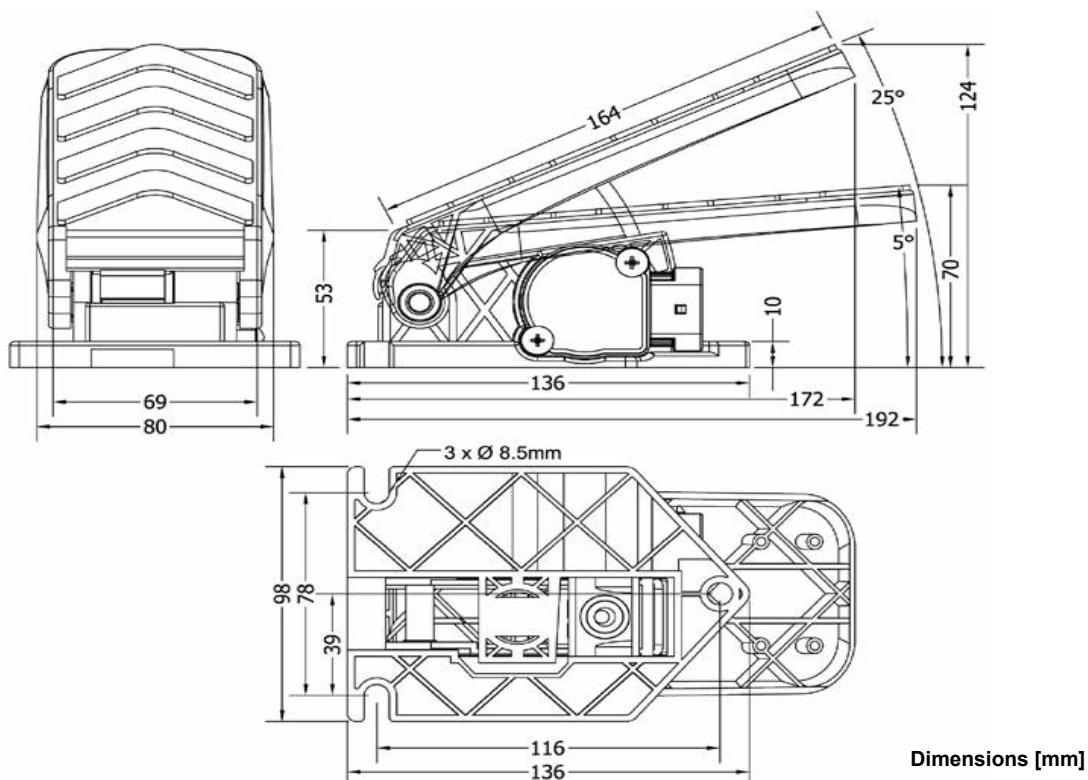

Single channel analog with or without idle switch	Bosch EDC, MAN, Iveco, Perkins, Scania DEC 2, VM, MTU, John Deere, Detroit Diesel, Deutz, CAT Series 3000
Single channel analog with idle switch (changeover contacts)	Cummins Euro 3 engines, SAE J1843
Dual channel analog	Cummins Euro 4/5, Bosch engine management system (EDC) < 80 mA (< 10 mA standby)
Single PWM	Perkins, CAT
Dual PWM	Mercedes, MAN

New generation - Integrated Pedals

Product S	Sensor Type E	Engine Type	Sensor 1 S	Sensor 2 I	VS1 I	VS2 D	rw

Drawings**Floor-Mounted Pedal (FMP) Pedal Integrated angle 25° (drawing D)**

The floor mounted pedal consists of a base unit (nylon 66 %, GFK 30 %) with an already mounted pedal plate, that has to be fixed in the passenger compartment. For the simulation of the pedal forces, the path-dependent hysteresis and for the security two return springs are equipped. Depending on the design, the feedback of the pedal position takes place over a non-contact sender whereby the electronic coupling provides an analogue or a PWM signal. The idle position identification is made by an opto coupler or mechanically over a micro switch.

5.1.b Pedals | Suspended Pedal**Steel lever**

The suspended pedal consists of a base unit (nylon 66%, GFK 30%) and a pre-fitted pedal lever (stainless steel, SUS 304, polished). Twin return springs are used to replicate the pedal forces and direction-dependent hysteresis and to provide added safety. Pedal position feedback is provided by a contactless sensor connected to either an analog or PWM signal circuit, depending on the variant. The no-load state can be detected either by an optocoupler or mechanically via a microswitch.

Plastic lever

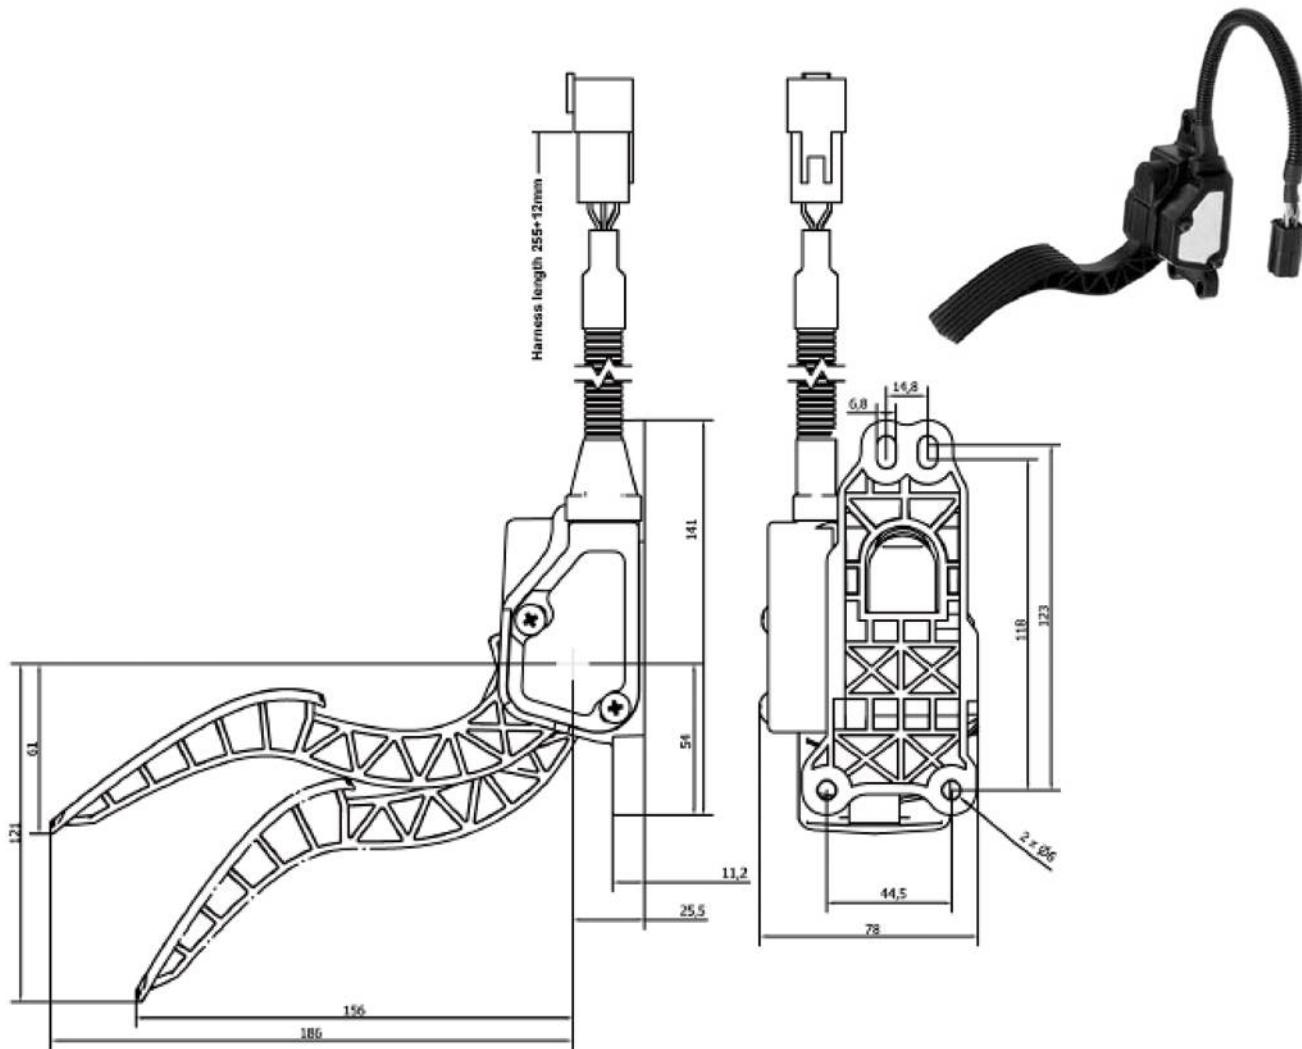

The suspended pedal consists of a base unit and a pre-fitted pedal lever (66% nylon, 30% GFRP). Twin return springs are used to replicate the pedal forces and direction-dependent hysteresis and to provide added safety. Pedal position feedback is provided by a contactless sensor connected to either an analog or PWM signal circuit, depending on the variant. The noload state can be detected either by an optocoupler or mechanically via a microswitch, according to the application.

New Generation – Integrated Suspended Pedals

Suspended accelerator pedal for use in commercial vehicles with electronically controlled engines for robust and save operation. Two different designs with different pedal arm lengths are available. The electrical signals of the pedal position are provided by a contactless sensor. Two build-in return springs are used for safety and resetting the pedal position. A special designed hysteresis element provides an excellent driving comfort. Different contactless hall sensor electronics provide analogue- or pulse width modulated (PWM) signals. The sensor is designed to manage all common used engine interfaces. For special applications the sensor can be designed to meet the customer requirements. An optional kickdown feeling is realized by using a special mechanism. In this case the upper analogue voltage or PWM value of the signal span is used for kickdown indication (no need of an additional signal input in the engine control unit).

**Features**

- Innovative, low-noise, compact design
- Rugged construction, suitable for many different applications
- Compatible with various engine interfaces
- Contactless, non-wearing sensors
- Integral twin return springs as per U.S. FMVSS-124
- Extremely reliable
- 6-pin connector (Delphi Packard, Type Metri Pack 150) built directly into sensor housing
- Customer-specific footplates can be accommodated on request
- Low noise pedal operation at no-load and full-load stops
- Quiet Kick-down
- Glass fiber-reinforcement of plastic parts subject to mechanical load (PA66GF33)
- Angle of travel, 18.5

Drawings**Integrated Suspended Pedal with Plastic Short Arm (drawing J)**

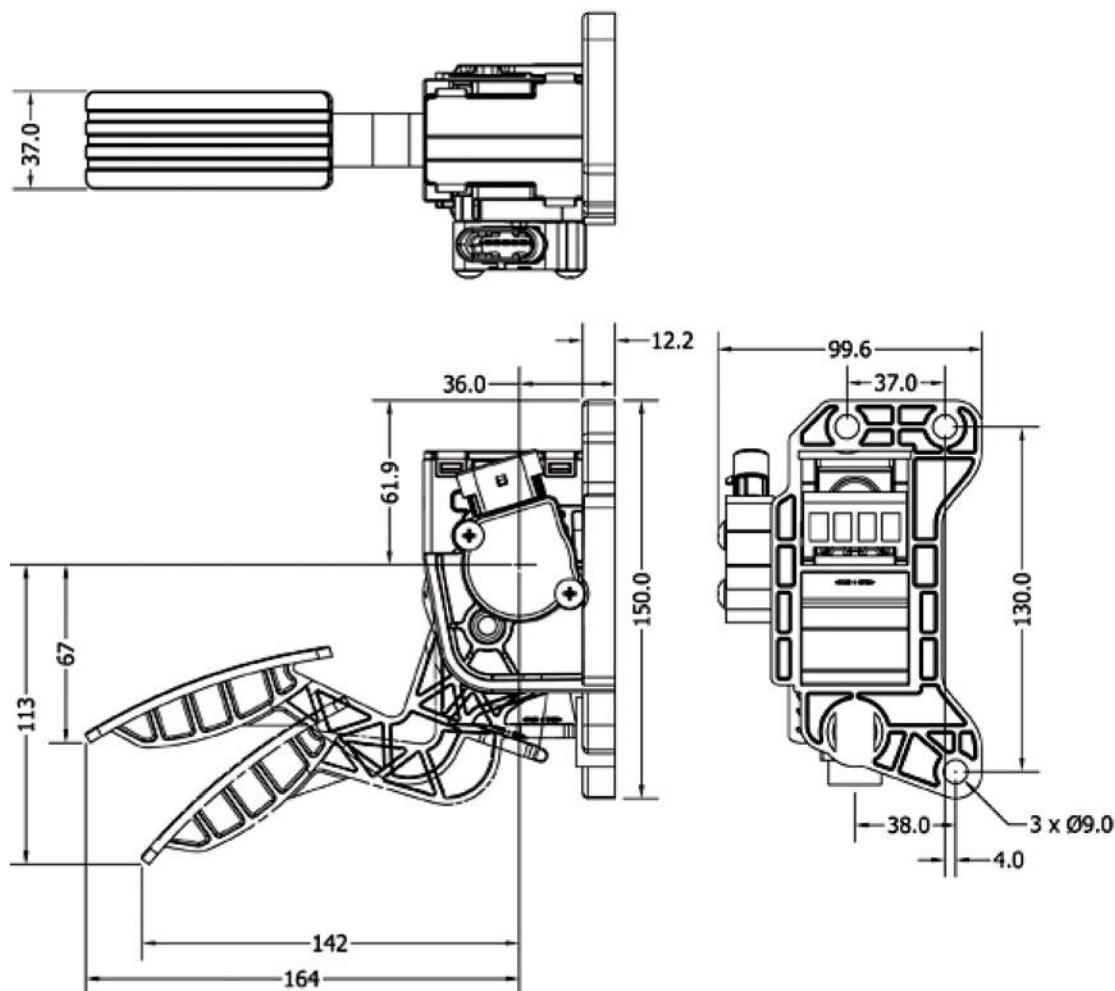

The suspended pedal consists of a base unit (nylon 66 %, GFK 30 %) with an already mounted pedal arm, that has to be fixed in the passenger compartment. For the simulation of the pedal forces, the path-dependent hysteresis and for the security two return springs are equipped. Depending on the design, the feedback of the pedal position takes place over a non-contact sender where by the electronic coupling provides an analogue or a PWM signal. The idle position identification be made by an opto coupler or mechanically over a micro switch.

Customer-Specific Solutions

Tractor pedal

Description

This system is designed for applications that demand a rugged and reliable pedal. The pedal features internal, dual-redundant return springs to enable a safe, reliable return action. Information about the position of the pedal is transmitted via a contactless Hall sensor. A range of sensor outputs is available, providing single or dual channel, analog or PWM signals.

Features

- Robust and versatile
- Range of interface options
- Contactless, non-wearing sensor
- Extremely reliable

Concept

Rugged mechanical parts allow customers to enjoy years of trouble-free service. The bearing for the pedal lever is based on non-wearing, synthetic materials. Angular movement is safely restricted to the desired range, even in tough applications, thanks to sturdy, firmly attached limit stops. Along with the electronic position signal determined by the Hall sensor signals, this makes that the correct idle and full-load positions are always maintained. Carefully specified friction elements provide continuous adjustment across the full adjustment range, which is essential for both safety and drivability.

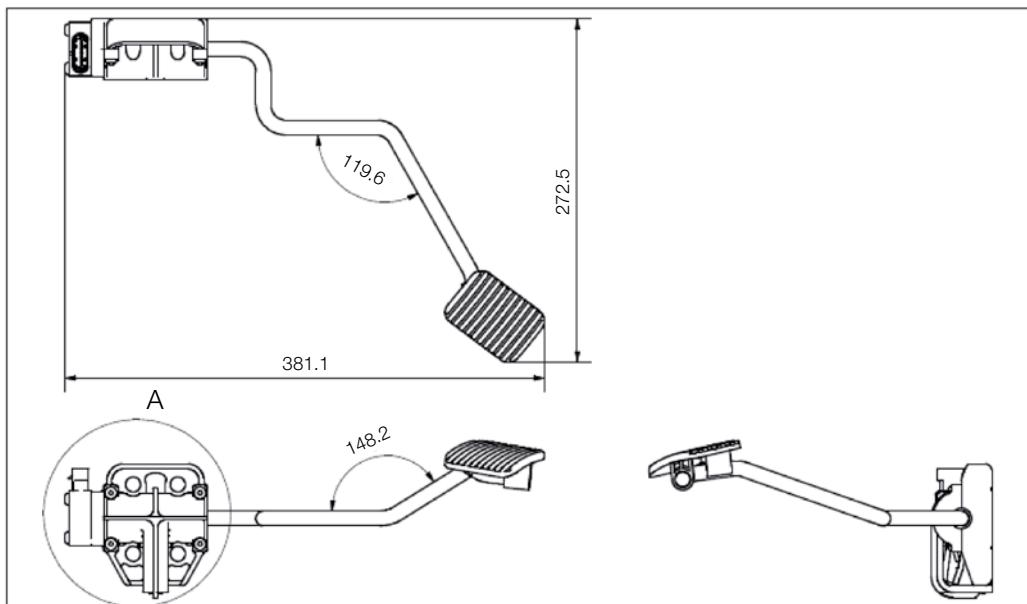

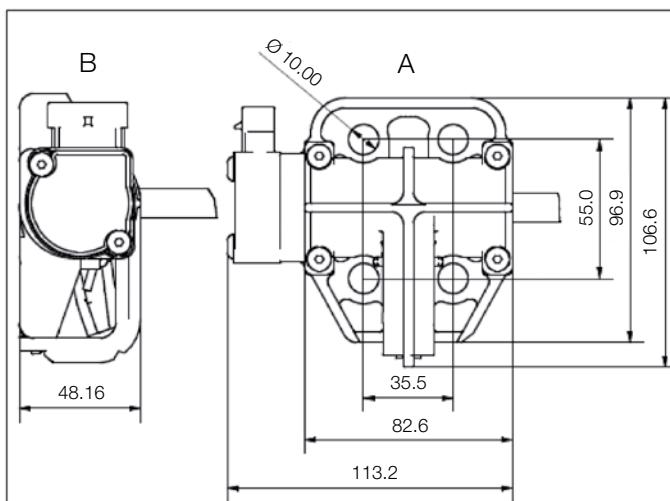

The sensor is connected directly to the vehicle wiring harness via a 6-pin connector (Delphi Packard Metri Pack 150, IP 67).

Tractor pedal

Dimensions [mm]

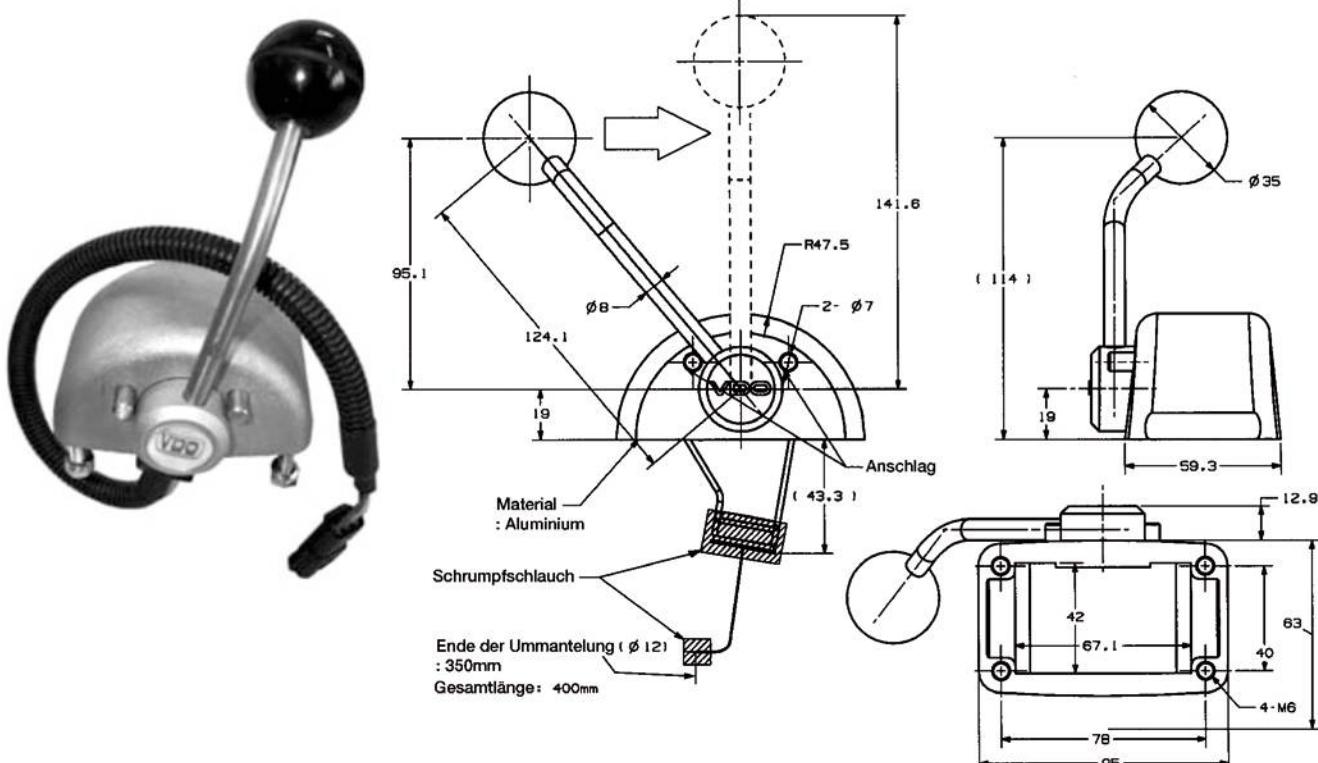

* The illustration shows one possible design option. The pedal arm geometry can be adapted to meet specific customer requirements.

5.2 Electromechanical Component | Hand-Operated Accelerators and Pedal Sensors**Hand-operated Accelerators**

Hand-operated accelerators for mounting in cab. Rugged housing (aluminum) for safe operation of the accelerators. No selfactuating return mechanism. Lever position feedback is provided by a contactless sensor connected to either an analog or PWM signal circuit, depending on the variant. The no-load state is detected either by an optocoupler or mechanically via a microswitch, according to the version.

Control Units and Electronic Network Solutions (ENS)

Control Units and Electronic Network Solutions (ENS)

Modern vehicles and machines are expected to provide increasingly high levels of efficiency, comfort, and functionality. Our smart onboard electronics system and control unit solutions make it possible to master this challenge.

Control units

We have extensive expertise in the development of control units for specific applications and individual requirements.

Electronic network solutions

Our network solutions for onboard vehicle electronics replace conventional electrics and bulky fixed wiring harnesses. Featuring flexible multiplex architectures, our state-of-the-art networks offer high performance and reliable diagnostics using distributed intelligence techniques. Drivers can access all relevant information at any time via a direct interface. Standard data buses enable easy connection of a variety of components.

Significant system cost reductions

Our onboard electronics system radically reduces the number of cables, connections, plugs, relays, and fuses installed in a vehicle. This significantly increases vehicle reliability and helps lower the cost of wiring, while also reducing the overhead associated with quality checks, documentation, and servicing. Alongside these savings, the costs related to procurement, inventory, and administration can also be trimmed.

* Only available for series production applications on request

Panel Design and Build*

From idea to finished panel

The panel forms the basis of each cockpit system and can be supplied in metal or plastic, as required. The complete system comprises the panel, instruments, switches, indicator lamps, and wiring harness and is delivered ready for installation. The instruments used come from our comprehensive VDO instrument range. Our versatile panel solutions can accommodate round or square instruments, digital displays, and audio systems with equal ease.

For us, designing instrument panels is all about meeting specific customer requirements. We work closely with our customers, developing their ideas to create the best possible panel for their needs.

11. Product Solutions and Applications

Robust, easy to use and aesthetic – enjoy the great sound!

Explore the new generation of radios – the result of an outstanding experience since decades. Vehicle sound systems from VDO have earned a strong reputation within the world of infotainment. This new range applies the harmony of pure aesthetic and sound to all kind of current music sources.

Varoius impressive models to choose from.

VDO vehicle audio systems are a crowning achievement of our successful continuous product optimization process. Their rugged, reliable construction makes them ideal for every application, from cruising the highway to the tough off-road environment.

The handling of the new VDO radios goes without further explanations by clear design, big buttons and turn keys with grip. Ease of use was a key priority, alongside high quality. The intuitive interface provides straightforward access to a sophisticated range of functionality and delight by handling a complex world in such a easy way.

Our new vehicle radios are available in different versions, including the top-of-the-range model with Bluetooth and Can-Bus integrated. Each version is available in both 12 Volts and 24 Volts variant.

OE Line 2

The new range of VDO radios make the most advanced features available to the user.

The RDS Tuner is equipped with a **Worldwide platform**. AM and FM frequency and spacing for Europe/USA/LATAM/ASIA configuration is accessible through radio menu by final user. International vehicle manufacturers do not care anymore what radio to be installed without knowing vehicle final destination.

The upper level models are equipped with **DAB Tuner** for the digital technology of radio, assuring the highest quality of the sound.

Each radio has a **backup memory** system to keep the memory of all the user settings and preset stations when main power is down.

Bluetooth® functionality is now built-in: a truly integrated voice mixing from your mobile phones onto the in-car speakers, and streaming MP3 files from your smartphone.

Rearview systems

The VDO Rearview systems are a good choice to increase safety in the workplace and to compensate for the risks associated with the vehicles mobility.

VDO offers a wide range of products, which are able to meet all needs.

Monitor

- 7" Colours Wide(16:9) TFT-LCD Monitor
- 1440 x 234 Pixels
- Mode: Nor./ Mir. and Up/ Down Image Reversing
- 10 ~ 32V DC Free Voltage supply
- 4 camera inputs (A2C59517753)
- 3 camera inputs (A2C59517754)
- 3/4 ch. Trigger function (auto power ON)
- Auto bright: built-in CDS sensor
- Auto detection of vehicle movement
- Accepts PAL, NTSC and SECAM formats
- 6 languages (English, German, Italian, French, Spanish, Japanese) OSD

- Automatic rear-gear activable distance marker
- A/V In for VCR, VCD, DVD, DVR-
- Optional button illumination through back lighting LEDs
- Built-in speaker
- Rainproof (IP 54)
- Vibration resistant (4G)
- Sun Visor with urethane protection (pat. pend.)

Technical data

Screen format	7" Wide / 155mm x 89mm
Resolution	1440 (W) x 234(H) mm
Dot Pitch	0.107(W) x 0.370(H)mm
View angle	Up 40° / Down 60° - Left 60° / Right 60°
Input formats	NTSC / PAL / SECAM
Input channels	3-4 cameras / AV Input (opt.)
Supply	DC 10~32V Free Voltage
Current consumption	Max 14 Watt
Operating temperature	from -20°C to +70°C
Storage temperature	from -30°C to +85°C
Dimension	Mm 186(W) x 132(H) x25(D)
Weight	kg 0.6

Part number	Description	Type	Input	Operating T	Dimension mm (WxHxD)	TV System
A2C59517753	7" Color QUAD Monitor	TFT LCD	4 TLC	-20°C +70°C	186x132x25	PAL/NTSC/SECAM
A2C59517754	7" Color Monitor	TFT LCD	3TLC	-20°C +70°C	186x132x25	PAL/NTSC/SECAM

Rear Cameras

- 1/3" Sensor Sony Super HAD CCD
- 420 TV lines (270 ,000 / 320,000Pixels) / 0 Lux at F2.0 (with LED ON)
- Normal and mirror mode
- LEDs IR for night vision
- Auto IRIS lens
- Audio function
- 100% Waterproof design (IP68)
- Alluminium diecast housing rustproof and vandalproof
- Vibration resistant (10G)
- Operating temperature from -30°C to +60°C (A2C59517750)

- Operating temperature from -50 to +60°C (A2C59517749)
- Wide View Angle 150° (120° for A2C59517749)
- Side installation possible (only A2C59517749)
- Heating system built-in
- Sun shield (only AC59517750)
- Dimension: mm 70(W)x42(H)x55(D) (A2C59517750)
- Dimension: mm 60(W)x55(H)x78.5(D) (A2C59517749)
- Weight: kg 0.3

Part number	Description	View angle	PAL Res. (pixel)	Operating T	Dimension mm (WxHxD)	IP
A2C59517749	Rear camera, grey case, colour	120°	320K	-50°C +60°C	60 x 55 x 78.5 mm	68
A2C59517750	Rear camera, black case, colour	150°	320K	-30°C +60°C	70 x 42 x 55 mm	68
A2C59517759	Side view camera, grey case, colour	120°	320K	-50°C +60°C	60 x 55 x 78.5 mm	68

Fit for marine use, can be mounted aft for mooring and maneuvering, and for displaying the engine room as well.

- Colour rear camera
- White case
- Waterproof (IP68)
- Wide view angle (150°)
- IR LED for night vision
- Anti-fog system

Accessories

Part Number	Descrizione
A2C59517751	10mt cable with connectors for A2C cameras
A2C59517752	20mt cable with connectors for A2C cameras
A2C59517755	ITA-A2C rearview systems adapter cable
A2C59517761	5mt extension cable for A2C cameras
A2C59517764	50mt extension cable
ITA-C82-ACC-000	18mt extension cable for ITA cameras
ITA-C82-ACC-001	5mt extension cable for ITA cameras

ProViu™ ASL360 360-degree all-round view

ProViu 360 is a camera-based assistance system for construction and special-purpose vehicles. The system allows the driver to see into the vehicle's blind spots for risk-free maneuvering and offers all-round monitoring of the vehicle.

10. Surround View Systems

The system is composed of 4 wide angle fisheye cameras, an electronic control unit (ECU) and a display. It's allowed to add up to 2 additional cameras to enable further 2D perspectives. The ASL360 Surround View Processing Unit combines the inputs of the cameras into a single all-round view to mitigate the many blind spots around a vehicle, producing a highly accurate picture of the immediate vicinity.

ECU

Camera

General:		
	6 camera inputs	Multiple glass element lens
	Multiple screen	Aperture F2.0 (nom)
	"Virtual camera" views	True Horizontal Field of View 180°
	"Real Time" view	CMOS color sensor size 1/4"
	Custom overlays and configurable blending	Minimum illumination 0.1 Lux
	Custom user interface	Signal to Noise ratio 46dB
	Vibration test for ISO 16001 / ISO 15998	Vibration test for ISO 16001 / ISO 15998
	Mechanical shock tests DIN EN IEC 60028-2-27	Mechanical shock tests DIN EN IEC 60028-2-27
	Operating and storage temperature: -40° to +85° C	Output 720 x 576 (PAL)
	Die-cast aluminium case with two mounting points	IP69K protection
	Dim. (wxhxd) 225x120x35 mm	Max. dimension from base ~48mm
	Max cable run >50m	Orientable mount: ~+/-30degrees in all planes
Electrical:		
	Operating voltage 9V-32V	Minimum supply voltage 9V
	Transient & Overvoltage and reverse polarity protections	Transient & Overvoltage and reverse polarity protections
	Power consumption 6W typ.	Power consumption 0,5W typ.
	Camera Cable type Power+TP+LIN with robust M12 industrial type connectors	Camera Cable type Power+TP+LIN with robust M12 industrial type connectors
	Video output SVGA (800x600), VGA, PAL or NTSC	
	Inputs from vehicle systems	
	PC output M12 to RJ45 connector (ethernet)	
Safety:		
	Anti-stall	Frame counter
	Low latency	

10. Surround View Systems

Field of applications are:

- Trucks
- Mining/Quarrying
- Automotive
- Waste collection
- Construction Equipment
- Marine
- Emergency Vehicles

ProViu™ ASL 360 Features	Benefits
Four-Camera Surround View Driver Assistance enables the driver to see 360° around the vehicle on display.	A unique picture to assist low-speed manoeuvrability and security. The surroundings can be seen top-down from a bird's eye view perspective
Four wide-angle lens to get a 360 degrees view in a whole picture.	Removing of blind spots around the vehicle during critical and precise manoeuvres in different traffic situations.
Genuine Real Time delivery at 30 frames per second.	The surround view image is always clear and fluent.
"Watchdog" feature allows to automatically disable the signal from a camera in case of damages	The surround view image doesn't freeze
Installation and calibration can be performed on site by a single operator with the use of calibration softwasre	A short time is needed to set up the system
Flexible software tool chain	Custom interfaces and views are possible without the need to develop custom software.

Part Number	Description
A2C59516756	ASL360 package including 4 cameras, ECU, System Cable, Video splitter cable with RCA adapter
A2C59516762	ASL 360 Camera cable 2,5mt
A2C59516759	ASL 360 Camera cable 10,0mt
A2C59516760	ASL 360 Camera cable 15,0mt
A2C59516761	ASL 360 Camera cable 20,0mt
A2C59516758	ASL 360 Software license

Accessories and Spare Parts

Part Number	Description
A2C59516763	ASL 360 Wide-angle camera including plastic cover
A2C59516764	ASL 360 Control Unit (ECU)
A2C59516765	ASL 360 Video splitter cable
A2C59516766	ASL 360 Control Unit (ECU) system cable
A2C59516767	ASL 360 Ethernet setup cable
A2C59516768	ASL 360 camera plastic cover
